# 使用 PlantUML 绘制的 UML

语言参考指引 (2016 年 12 月 8 日星期四上午 11:32)

PlantUML 是一个开源项目,并支持快速绘制:

- 时序图
- 用例图
- 类图
- 活动图
- 组件图
- 状态图
- 对象图

以简单并带指引性语言定义各种视图。

## 1 时序图

## 1.1 简单示例

你可以使用 -> 来绘制参与者之间的消息传递, 而不必显式的声明参与者。

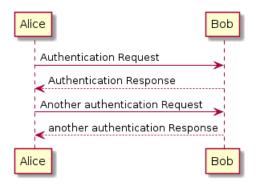

你也可以使用"-->"绘制一个虚线箭头表示异步消息。

另外,你也可以使用"<-"和"<--"。这虽然不影响图形绘制,但可以增加可读性。注意:仅适用于时序图,其它图形的规则是不同的。

#### Ostartum1

Alice -> Bob: Authentication Request
Bob --> Alice: Authentication Response

Alice -> Bob: Another authentication Request Alice <-- Bob: another authentication Response @enduml

### 1.2 声明参与者

可以使用 participant 关键字来改变参与者的先后顺序。 你也可以使用其它关键字来声明参与者:

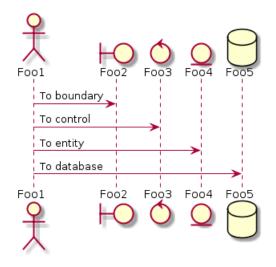

- actor
- boundary
- control
- entity
- database

@startuml
actor Foo1

boundary Foo2 control Foo3 entity Foo4

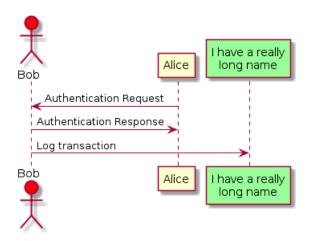

database Foo5

Foo1 -> Foo2 : To boundary Foo1 -> Foo3 : To control Foo1 -> Foo4 : To entity Foo1 -> Foo5 : To database

使用 as 关键字重命名参与者 你可以使用 RGB 值或者颜色名修改 actor 或参与者的背景色。

```
@startuml
actor Bob #red
' The only difference between actor
'and participant is the drawing
participant Alice
participant "I have a really\nlong name" as L #99FF99
/' You can also declare:
participant L as "I have a really\nlong name" #99FF99
'/
Alice->Bob: Authentication Request
Bob->Alice: Authentication Response
Bob->L: Log transaction
@enduml
```

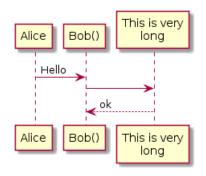

## 1.3 在参与者中使用非字符

你可以使用引号定义参与者。还可以用 as 关键字给参与者定义别名。

```
@startuml
Alice -> "Bob()" : Hello
"Bob()" -> "This is very\nlong" as Long
' You can also declare:
' "Bob()" -> Long as "This is very\nlong"
Long --> "Bob()" : ok
@enduml
```

1.4 消息发给自己 1 时序图

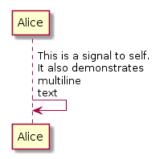

## 1.4 消息发给自己

参与者可以发消息给自己, 消息文字可以使用 \n 来换行。

#### @startum1

Alice->Alice: This is a signal to self. $\n$ It also demonstrates $\n$ It iline  $\n$ Oenduml

## 1.5 更改箭头的样式

修改箭头样式的方式有以下几种:

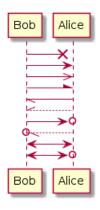

- 末尾加 x 表示一条丢失的消息
- 使用\或 / 替代 < 或 > 来表示 have only the bottom or top part of the arrow
- 使用两个箭头标记 (如 >> 或 //) 表示空心箭头。
- 使用 -- 替代 以表示虚线箭头。
- 在箭头末尾加"o"
- 双向箭头。

#### @startuml

Bob ->x Alice
Bob -> Alice
Bob -> Alice
Bob -\ Alice
Bob \\- Alice
Bob //-- Alice

Bob ->o Alice Bob o\\-- Alice

Bob <-> Alice Bob <->o Alice @enduml 1.6 修改箭头颜色 1 时序图

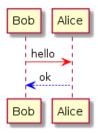

## 1.6 修改箭头颜色

你可以用以下语法修改箭头标记的颜色:

@startum1

Bob -[#red]> Alice : hello
Alice -[#0000FF]->Bob : ok
@enduml

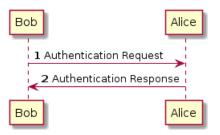

## 1.7 消息编号

autonumber 关键字用于自动的给消息加上编号。

@startuml
autonumber

Bob -> Alice : Authentication Request
Bob <- Alice : Authentication Response

@enduml

你还可以用 autonumber 'start' 的语法指定编号的初始值, 而用 autonumber 'start' 'increment' 可以同时指定编号的初始值和每次增加的值。

# @startuml autonumber

Bob -> Alice : Authentication Request Bob <- Alice : Authentication Response

autonumber 15

Bob -> Alice : Another authentication Request Bob <- Alice : Another authentication Response

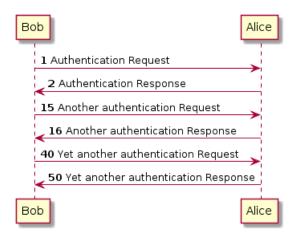

autonumber 40 10

 ${\tt Bob} \ \mbox{->} \ {\tt Alice} \ : \ {\tt Yet} \ \ {\tt another} \ \ {\tt authentication} \ \ {\tt Request}$ 

1.7 消息编号 1 时序图

Bob <- Alice : Yet another authentication Response

@enduml

你可以在双引号内指定编号的格式。

格式是由 Java 的 DecimalFormat 类实现的 ('0' 表示数字, '#' 表示数字且默认为 0)。你还可以使用 HTML 标签来制定格式。

#### @startuml

autonumber "<b>[000]"

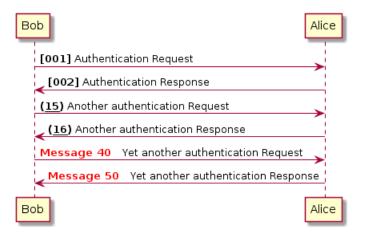

Bob -> Alice : Authentication Request
Bob <- Alice : Authentication Response

autonumber 15 "<b>(<u>##</u>)"

Bob -> Alice : Another authentication Request Bob <- Alice : Another authentication Response

autonumber 40 10 "<font color=red><b>Message 0 "
Bob -> Alice : Yet another authentication Request
Bob <- Alice : Yet another authentication Response</pre>

@enduml

可以使用 autonumber stop 和 autonumber resume 'increment' 'format' 来象征暂停或继续使用自动编号。

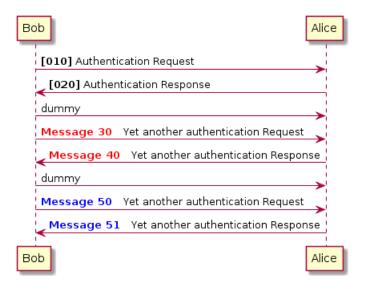

#### @startum1

autonumber 10 10 "<b>[000]"

Bob -> Alice : Authentication Request
Bob <- Alice : Authentication Response

autonumber stop
Bob -> Alice : dummy

```
autonumber resume "<font color=red><b>Message 0 "
Bob -> Alice : Yet another authentication Request
Bob <- Alice : Yet another authentication Response
autonumber stop
Bob -> Alice : dummy
autonumber resume 1 "<font color=blue><b>Message 0
Bob -> Alice : Yet another authentication Request
Bob <- Alice : Yet another authentication Response
Genduml
```

## 1.8 分割图表 (diagram)

关键字 newpage 用于把一个图表分割到多个图片中。 还可以在关键字 newpage 之后添加文字作为新图标的标题。 这便于在 *Word* 中打印多页的长图。

#### @startum1

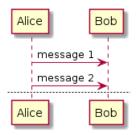

```
Alice -> Bob : message 1
Alice -> Bob : message 2

newpage

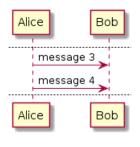

Alice -> Bob : message 3
Alice -> Bob : message 4

newpage A title for the\nlast page

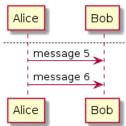

Alice -> Bob : message 5
Alice -> Bob : message 6
Qenduml
```

1.9 组合消息 1 时序图

# A title for the last page

## 1.9 组合消息

我们可以通过以下关键词将组合消息:

- alt/else
- opt
- loop
- par
- break
- critical
- group, 后面紧跟着消息内容

可以在标头 (header) 添加需要显示的文字 (group 除外)。 关键词 end 用来结束分组。 注意,分组可以嵌套使用。

### 0startum1

Alice -> Bob: Authentication Request

alt successful case

Bob -> Alice: Authentication Accepted

else some kind of failure

Bob -> Alice: Authentication Failure group My own label Alice -> Log : Log attack start loop 1000 times Alice -> Bob: DNS Attack end Alice -> Log : Log attack end

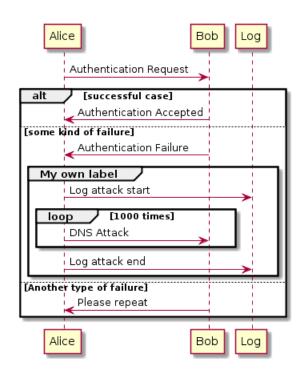

else Another type of failure

Bob -> Alice: Please repeat

end @enduml

end

1.10 给消息添加注释 1 时序图

## 1.10 给消息添加注释

我们可以通过在消息后面添加 note left 或者 note right 关键词来给消息添加注释。 你也可以通过使用 end note 来添加多行注释。

@startum1

Alice->Bob : hello

note left: this is a first note

Bob->Alice : ok

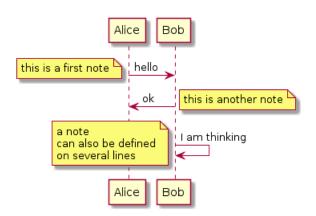

note right: this is another note

Bob->Bob : I am thinking

note left
a note

can also be defined on several lines

end note @enduml

### 1.11 其他的注释

可以使用 note left of, note right of 或 note over 在节点 (participant) 的相对位置放置注释。 还可以通过修改背景色来高亮显示注释。 以及使用关键字 end note 来添加多行注释。 @startuml
participant Alice
participant Bob
note left of Alice #aqua
This is displayed
left of Alice.
end note

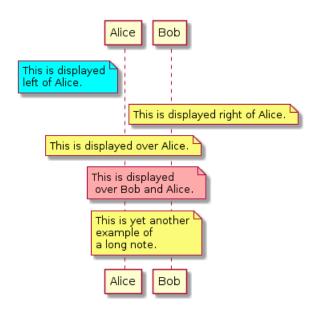

note right of Alice: This is displayed right of Alice.

note over Alice: This is displayed over Alice.

note over Alice, Bob #FFAAAA: This is displayed\n over Bob and Alice.

note over Bob. Alice

note over Bob, Alice This is yet another example of a long note. end note @enduml

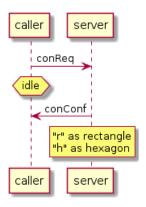

## 1.12 改变备注框的形状

你可以使用 hnote 和 rnote 这两个关键字来修改备注框的形状。

#### @startuml

caller -> server : conReq
hnote over caller : idle
caller <- server : conConf
rnote over server
"r" as rectangle
"h" as hexagon
endrnote
@enduml</pre>

1.13 Creole 和 HTML 1 时序图

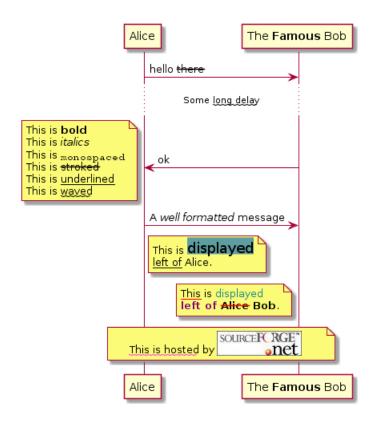

## 1.13 Creole 和 HTML

可以使用 creole 格式。

```
@startum1
participant Alice
participant "The **Famous** Bob" as Bob
Alice -> Bob : hello --there--
... Some ~~long delay~~ ...
Bob -> Alice : ok
note left
This is **bold**
This is //italics//
This is ""monospaced""
This is --stroked--
This is __underlined__
This is ~~waved~~
end note
Alice -> Bob : A //well formatted// message
note right of Alice
This is <back:cadetblue><size:18>displayed</size></back>
__left of__ Alice.
end note
note left of Bob
\u:red>This</u> is <color #118888>displayed</color>
**<color purple>left of</color> <s:red>Alice</strike> Bob**.
end note
note over Alice, Bob
<w:#FF33FF>This is hosted</w> by <img sourceforge.jpg>
end note
@enduml
```

1.14 分隔符 1 时序图

## 1.14 分隔符

你可以通过使用 == 关键词来将你的图表分割多个步骤。

@startuml

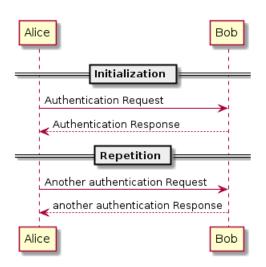

== Initialization ==

Alice -> Bob: Authentication Request
Bob --> Alice: Authentication Response

== Repetition ==

Alice -> Bob: Another authentication Request Alice <-- Bob: another authentication Response

@enduml

## 1.15 引用

你可以在图中通过使用 ref over 关键词来实现引用

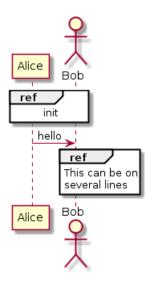

1.16 延迟 1 时序图

Ostartuml
participant Alice
actor Bob

ref over Alice, Bob : init

Alice -> Bob : hello

ref over Bob
This can be on
several lines
end ref
@enduml

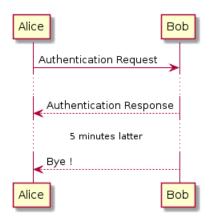

## 1.16 延迟

你可以使用...来表示延迟,并且还可以给延迟添加注释。

Alice -> Bob: Authentication Request ...
Bob --> Alice: Authentication Response ...5 minutes latter...
Bob --> Alice: Bye !

@enduml

## 1.17 空间

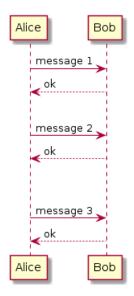

你可以使用 ||| 来增加空间。 还可以使用数字指定增加的像素的数量。

#### @startuml

Alice -> Bob: message 1
Bob --> Alice: ok
|||
Alice -> Bob: message 2
Bob --> Alice: ok
||45||
Alice -> Bob: message 3
Bob --> Alice: ok

#### @enduml

## 1.18 生命线的激活与撤销

关键字 activate 和 deactivate 用来表示参与者的生命活动。 一旦参与者被激活,它的生命线就会显示出来。 activate 和 deactivate 适用于以上情形。 destroy 表示一个参与者的生命线的终结。

@startuml
participant User

User -> A: DoWork activate A

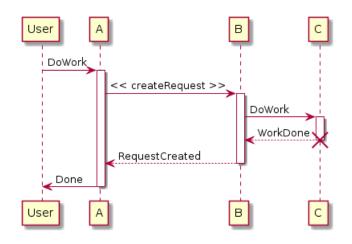

A -> B: << createRequest >> activate B

B -> C: DoWork
activate C
C --> B: WorkDone
destroy C

B --> A: RequestCreated
deactivate B

A -> User: Done deactivate A

1.19 创建参与者 1 时序图

还可以使用嵌套的生命线、并且运行给生命线添加颜色。

@startuml
participant User

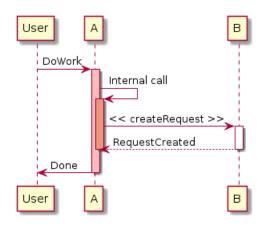

User -> A: DoWork activate A #FFBBBB

A -> A: Internal call activate A #DarkSalmon

A -> B: << createRequest >> activate B

B --> A: RequestCreated deactivate B deactivate A A -> User: Done deactivate A

@enduml

## 1.19 创建参与者

你可以把关键字 create 放在第一次接收到消息之前,以强调本次消息实际上是在创建新的对象。

@startuml

Bob -> Alice : hello

create Other

Alice -> Other : new

create control String

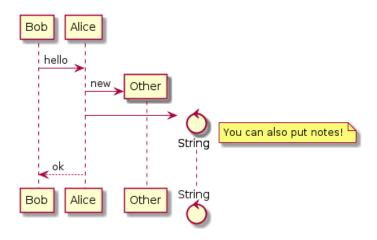

Alice -> String

note right : You can also put notes!

Alice --> Bob : ok

1.20 进入和发出消息 1 时序图

@enduml

## 1.20 进入和发出消息

如果只想关注部分图示, 你可以使用进入和发出箭头。 使用方括号 [和] 表示图示的左、右两侧。

@startuml
[-> A: DoWork

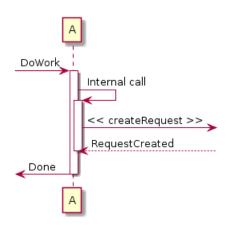

activate A

A -> A: Internal call activate A

A ->] : << createRequest >>

A < --] : RequestCreated deactivate A

[<- A: Done
deactivate A
@enduml</pre>

还可以使用下面的语法:

@startuml

[-> Bob

[o-> Bob

[o->o Bob

[x-> Bob

[<- Bob

[x<- Bob

1.21 构造类型和圈点 1 时序图

Bob ->]
Bob ->o]
Bob o->o]
Bob ->x]

Bob <-]
Bob x<-]
@endum1

## 1.21 构造类型和圈点

可以使用 << 和 >> 给参与者添加构造类型。

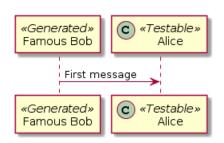

在构造类型中, 你可以使用 (X,color) 格式的语法添加一个圆圈圈起来的字符。

#### @startuml

participant "Famous Bob" as Bob << Generated >>
participant Alice << (C,#ADD1B2) Testable >>

Bob->Alice: First message

#### @enduml

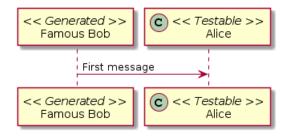

默认使用 guillemet 字符来显示构造类型。你可以使用外观参数 guillemet 来修改显示行为。

#### @startuml

skinparam guillemet false
participant "Famous Bob" as Bob << Generated >>
participant Alice << (C,#ADD1B2) Testable >>

Bob->Alice: First message

1.22 更多标题信息 1 时序图

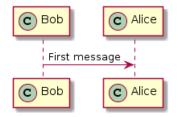

#### @startuml

participant Bob << (C,#ADD1B2) >>
participant Alice << (C,#ADD1B2) >>

Bob->Alice: First message

@enduml

## 1.22 更多标题信息

你可以在标题中使用 creole 格式。

@startum1

title \_\_Simple\_\_ \*\*communication\*\* example

Alice -> Bob: Authentication Request Bob -> Alice: Authentication Response

@enduml

#### Simple communication example

在标题描述中使用 \n 表示换行。

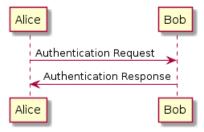

@startuml

title \_\_Simple\_\_ communication example\non several lines

Alice -> Bob: Authentication Request Bob -> Alice: Authentication Response

1.23 包裹参与者 1 时序图

# Simple communication example on several lines

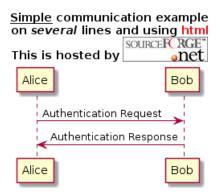

还可以使用关键字 title 和 end title 定义多行标题。

#### @startum1

title
<u>Simple</u> communication example
on <i>several</i> lines and using <font color=red>html</font>
This is hosted by <img:sourceforge.jpg>
end title

Alice -> Bob: Authentication Request
Bob -> Alice: Authentication Response

@enduml

## 1.23 包裹参与者

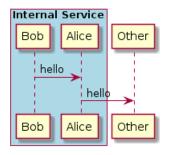

可以使用 box 和 end box 画一个盒子将参与者包裹起来。 还可以在 box 关键字之后添加标题或者背景颜色。

#### @startuml

box "Internal Service" #LightBlue participant Bob participant Alice end box participant Other

Bob -> Alice : hello Alice -> Other : hello

1.24 移除脚注 1 时序图

### 1.24 移除脚注

使用 hide footbox 关键字移除脚注。

@startum1

hide footbox title Footer removed

Alice -> Bob: Authentication Request
Bob --> Alice: Authentication Response

@enduml

## 1.25 外观参数 (skinparam)

使用 skinparam 命令改变颜色和字体。 如下场景可以使用这一命令:

- 在图示定义中,
- 在一个包含文件中,
- 在由命令行或者 ANT 任务提供的配置文件中。

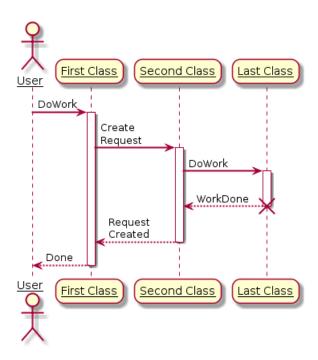

你也可以修改其他渲染元素,如以下示例:

```
@startuml
{\tt skinparam \ sequenceArrowThickness \ 2}
skinparam roundcorner 20
{\tt skinparam\ maxmessagesize\ 60}
skinparam sequenceParticipant underline
actor User
participant "First Class" as A
participant "Second Class" as B
participant "Last Class" as C
User -> A: DoWork
activate A
A -> B: Create Request
activate B
B -> C: DoWork
activate C
C --> B: WorkDone
```

destroy C

B --> A: Request Created deactivate B

A --> User: Done deactivate A

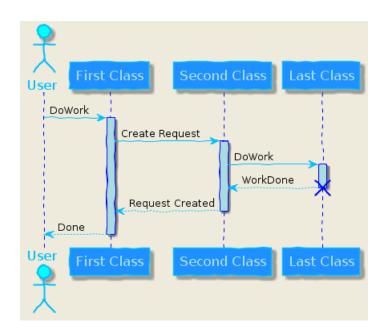

```
@startuml
skinparam backgroundColor #EEEBDC
skinparam handwritten true
{\tt skinparam \ sequence \ } \{
ArrowColor DeepSkyBlue
ActorBorderColor DeepSkyBlue
LifeLineBorderColor blue
LifeLineBackgroundColor #A9DCDF
ParticipantBorderColor DeepSkyBlue
{\tt ParticipantBackgroundColor\ DodgerBlue}
ParticipantFontName Impact
ParticipantFontSize 17
ParticipantFontColor #A9DCDF
ActorBackgroundColor aqua
ActorFontColor DeepSkyBlue
ActorFontSize 17
ActorFontName Aapex
actor User
participant "First Class" as A
participant "Second Class" as B participant "Last Class" as C
User -> A: DoWork
activate A
A -> B: Create Request
activate B
B -> C: DoWork
activate C
```

C --> B: WorkDone
destroy C

B --> A: Request Created deactivate B

A --> User: Done deactivate A

## 2 用例图

## 2.1 用例

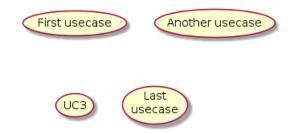

用例用圆括号括起来。

也可以用关键字 usecase 来定义用例。还可以用关键字 as 定义一个别名,这个别名可以在以后定义关系的时候使用。

#### @startum1

(First usecase)
(Another usecase) as (UC2)
usecase UC3
usecase (Last\nusecase) as UC4

@enduml

## 2.2 角色

角色用两个冒号包裹起来。

也可以用 actor 关键字来定义角色。还可以用关键字 as 来定义一个别名,这个别名可以在以后定义关系的时候使用。

后面我们会看到角色的定义是可选的。

#### @startuml

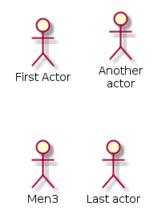

:First Actor:

:Another\nactor: as Men2

actor Men3

actor :Last actor: as Men4

@enduml

## 2.3 用例描述

如果想定义跨越多行的用例描述,可以用双引号将其裹起来。 还可以使用这些分隔符: --.. == \_\_。并且还可以在分隔符中间放置标题。

2.4 基础示例 2 用例图

#### @startum1

usecase UC1 as "You can use several lines to define your usecase. You can also use separators. -Several separators are possible. ==
And you can add titles:
...Conclusion..
This allows large description."

@enduml

You can use
several lines to define your usecase.
You can also use separators.
Several separators are possible.
And you can add titles:
Conclusion
This allows large description.

## 2.4 基础示例

用箭头 --> 连接角色和用例。

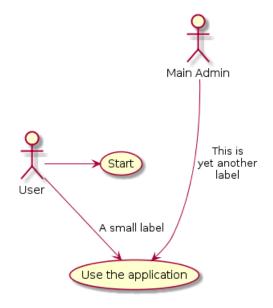

横杠"-"越多,箭头越长。通过在箭头定义的后面加一个冒号及文字的方式来添加标签。在这个例子中,*User* 并没有定义,而是直接拿来当做一个角色使用。

#### @startuml

User -> (Start)
User --> (Use the application) : A small label

:Main Admin: ---> (Use the application) : This is  $\nyet$  another  $\nyet$ 

### @enduml

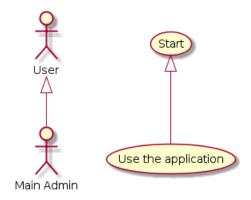

## 2.5 继承

如果一个角色或者用例继承于另一个,那么可以用 < 1--符号表示(它表示✓——

2.6 使用注释 2 用例图

```
@startuml
:Main Admin: as Admin
(Use the application) as (Use)
User <|-- Admin
(Start) <|-- (Use)</pre>
```

@enduml

## 2.6 使用注释

可以用 note left of, note right of, note top of, note bottom of 等关键字给一个对象添加注释。

注释还可以通过 note 关键字来定义, 然后用.. 连接其他对象。

```
@startuml
:Main Admin: as Admin
(Use the application) as (Use)

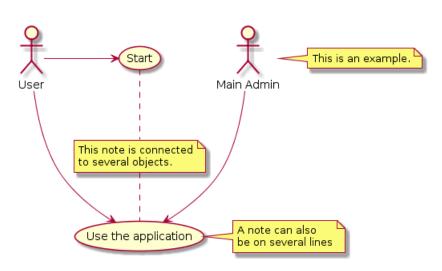

User -> (Start)
User --> (Use)

Admin ---> (Use)

note right of Admin : This is an example.

note right of (Use)
A note can also
be on several lines
end note

note "This note is connected\nto several objects." as N2
(Start) .. N2
N2 .. (Use)
@enduml
```

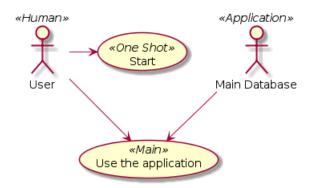

2.7 构造类型 2 用例图

## 2.7 构造类型

用" << "和" >> "来定义角色或者用例的构造类型。

@startuml
User << Human >>
:Main Database: as MySql << Application >>
(Start) << One Shot >>
(Use the application) as (Use) << Main >>
User -> (Start)
User --> (Use)

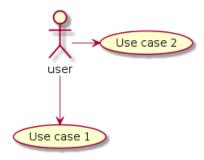

@enduml

## 2.8 改变箭头方向

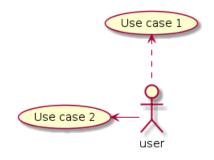

默认连接是竖直方向的,用 --表示, 可以用一个横杠或点来表示水平连接。

@startum1
:user: --> (Use case 1)
:user: -> (Use case 2)
@endum1

也可以通过翻转箭头来改变方向。

@startuml
(Use case 1) <...:user:
(Use case 2) <- :user:
@enduml</pre>

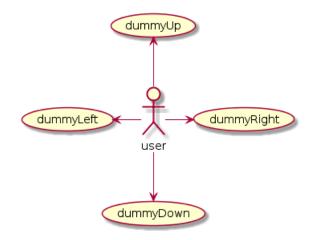

2.9 分割图示 2 用例图

还可以通过给箭头添加 left, right, up 或 down 等关键字来改变方向。

#### @startuml

:user: -left-> (dummyLeft)
:user: -right-> (dummyRight)
:user: -up-> (dummyUp)
:user: -down-> (dummyDown)
@endum1

这些方向关键字也可以只是用首字母或者前两个字母的缩写来代替。 但是请注意,这样的缩写不要乱用,Graphviz 不喜欢这样。

## 2.9 分割图示

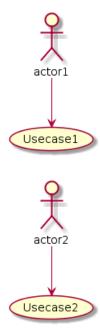

用 newpage 关键字将图示分解为多个页面。

#### @startuml

:actor1: --> (Usecase1)

newpage

:actor2: --> (Usecase2)

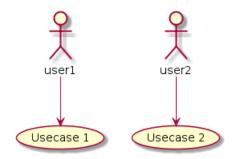

2.10 从左向右方向 2 用例图

## 2.10 从左向右方向

默认从上往下构建图示。

@startum1
'default
top to bottom direction
user1 --> (Usecase 1)
user2 --> (Usecase 2)

@enduml

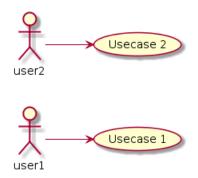

你可以用 left to right direction 命令改变图示方向。

@startum1

left to right direction
user1 --> (Usecase 1)
user2 --> (Usecase 2)

@enduml

## 2.11 显示参数

用 skinparam 改变字体和颜色。 可以在如下场景中使用:

- 在图示的定义中,
- 在引入的文件中,
- 在命令行或者 ANT 任务提供的配置文件中。

你也可以给构造的角色和用例指定特殊颜色和字体。

@startuml
skinparam handwritten true

skinparam usecase {
BackgroundColor DarkSeaGreen
BorderColor DarkSlateGray

BackgroundColor << Main >> YellowGreen

2.12 一个完整的例子 2 用例图

```
BorderColor << Main >> YellowGreen

ArrowColor Olive
ActorBorderColor black
ActorFontName Courier

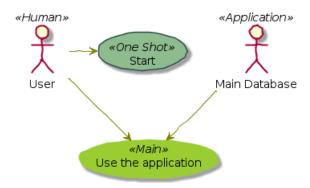

ActorBackgroundColor << Human >> Gold
}

User << Human >>
:Main Database: as MySql << Application >>
(Start) << One Shot >>
(Use the application) as (Use) << Main >>

User -> (Start)
User -> (Use)

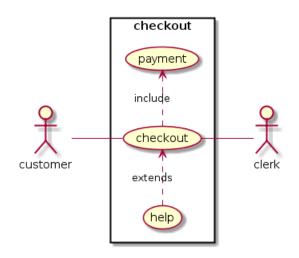

MySql --> (Use)
```

#### @enduml

## 2.12 一个完整的例子

@startuml
left to right direction
skinparam packageStyle rect
actor customer
actor clerk
rectangle checkout {
 customer -- (checkout)
 (checkout) .> (payment) : include
 (help) .> (checkout) : extends
 (checkout) -- clerk
}
@enduml

## 3 类图

## 3.1 类之间的关系

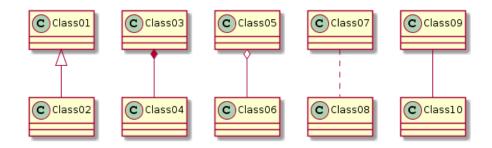

类之间的关系通过下面的符号定义:

继承 (extension)	<	$\Diamond$
合成 (composition)	*	•
聚合 (aggregation)	0	<b>◇</b> —

使用".."来代替"--"可以得到点线. 在这些规则下,也可以绘制下列图形

#### 0startum1

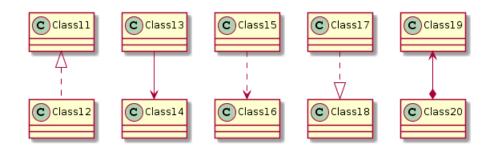

Class01 <|-- Class02 Class03 \*-- Class04 Class05 o-- Class06 Class07 .. Class08 Class09 -- Class10 @enduml

#### @startuml

Class11 <|.. Class12
Class13 --> Class14
Class15 ..> Class16
Class17 ..|> Class18
Class19 <--\* Class20

@enduml

## 3.2 关系上的标识

在关系之间使用标签来说明时,使用":"后接标签文字。 对元素的说明,你可以在每一边使用""来说明.

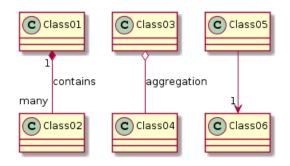

#### @startum1

Class01 "1" \*-- "many" Class02 : contains

ClassO3 o-- ClassO4 : aggregation

Class05 --> "1" Class06

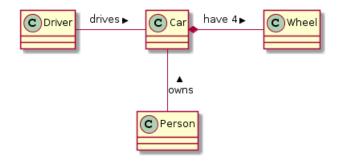

3.2 关系上的标识 3 类图

在标签的开始或结束位置添加 < 或 > 以表明是哪个对象作用到哪个对象上。

@startuml
class Car

Driver - Car : drives > Car \*- Wheel : have 4 > Car -- Person : < owns

3.3 添加方法 3 类图

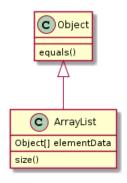

## 3.3 添加方法

为了声明域或者方法,你可以使用后接域名或方法名。 系统检查是否有括号来判断是方法还是域。

```
@startuml
Object <|-- ArrayList

Object : equals()
ArrayList : Object[] elementData
ArrayList : size()

@enduml</pre>
```

也可以使用 { 把域或者方法括起来

注意,这种语法对于类型/名字的顺序是非常灵活的。

```
@startuml
class Dummy {
String data
void methods()
}

class Flight {
flightNumber : Integer
departureTime : Date
}
@enduml
```

3.4 定义可访问性 3 类图

## 3.4 定义可访问性

一旦你定义了域或者方法,你可以定义相应条目的可访问性质。

_			private
#	<b> \tau \tau \tau \tau \tau \tau \tau \tau</b>	<b></b>	protected
~	Δ	_	package private
+	0	•	public

### @startuml

```
class Dummy {
  field1
#field2
  method1()
  +method2()
}
```

@enduml

@enduml

你可以采用以下命令停用这些特性 skinparam classAttributeIconSize 0:

```
@startum1
skinparam classAttributeIconSize 0
class Dummy {
    -field1
#field2
    -method1()
+method2()
}
```

3.5 抽象与静态 3 类图

## 3.5 抽象与静态

通过修饰符 static 或者 abstract,可以定义静态或者抽象的方法或者属性。 这些修饰符可以写在行的开始或者结束。也可以使用 classifier 这个修饰符来代替 static.

@startuml
class Dummy {
{static} String id
{abstract} void methods()
}
@enduml

3.6 高级类体 3 类图

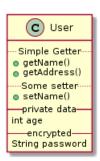

## 3.6 高级类体

PlantUML 默认自动将方法和属性重新分组,你可以自己定义分隔符来重排方法和属性,下面的分隔符都是可用的: -- .. == \_\_.

还可以在分隔符中添加标题:

```
@startuml
class Foo1 {
You can use
several lines
as you want
and group
==
things together.
You can have as many groups
as you want
End of class
class User {
.. Simple Getter ..
+ getName()
+ getAddress()
.. Some setter ..
+ setName()
__ private data __
int age
-- encrypted --
String password
```

3.7 备注和模板 3 类图

### 3.7 备注和模板

模板通过类关键字 ("«"和"»")来定义

你可以使用 note left of, note right of, note top of, note bottom of 这些关键字来添加备注。你还可以在类的声明末尾使用 note left, note right, note top, note bottom 来添加备注。

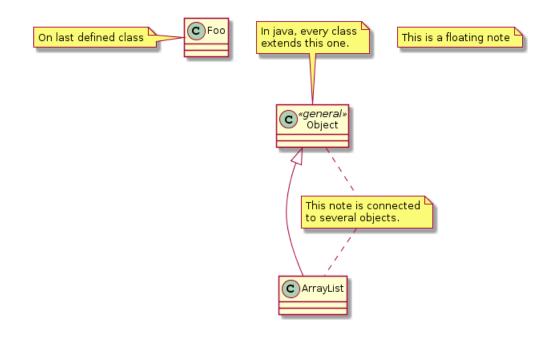

此外,单独用 note 这个关键字也是可以的,使用 .. 符号可以作出一条连接它与其它对象的虚线。

```
@startuml
class Object << general >>
Object <|--- ArrayList

note top of Object : In java, every class\nextends this one.

note "This is a floating note" as N1
note "This note is connected\nto several objects." as N2
Object .. N2
N2 .. ArrayList

class Foo
note left: On last defined class</pre>
@enduml
```

3.8 更多注释 3 类图

# 3.8 更多注释

可以在注释中使用部分 html 标签:

- <b>
- <u>
- <i>
- <s>, <del>, <strike>
- <font color="#AAAAAA"> or <font color="colorName">
- <color:#AAAAAA> or <color:colorName>
- <size:nn> to change font size
- <img src="file"> or <img:file> : the file must be accessible by the filesystem

你也可以在注释中展示多行。

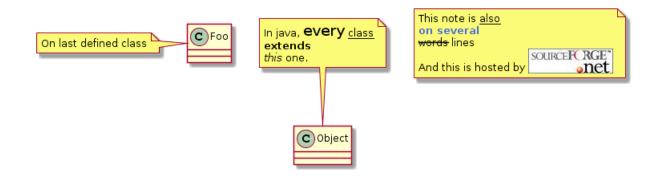

你也可以在定义的 class 之后直接使用 note left, note right, note top, note bottom 来定义注释。

### @startum1

```
class Foo
note left: On last defined class

note top of Object
In java, <size:18>every</size> <u>class</u>
<b>extends</b>
<i>this</i> one.
end note

note as N1
This note is <u>also</u>
<b><color:royalBlue>on several</color>
<s>words</s> lines
And this is hosted by <img:sourceforge.jpg>
end note
```

3.9 链接的注释 3 类图

# 3.9 链接的注释

在定义链接之后, 你可以用 note on link 给链接添加注释

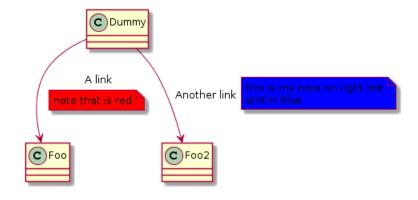

如果想要改变注释相对于标签的位置, 你也可以用 note left on link, note right on link, note bottom on link。(对应位置分别在 label 的左边, 右边, 下边)

### @startum1

class Dummy
Dummy --> Foo : A link

note on link #red: note that is red

Dummy --> Foo2 : Another link note right on link #blue this is my note on right link and in blue end note

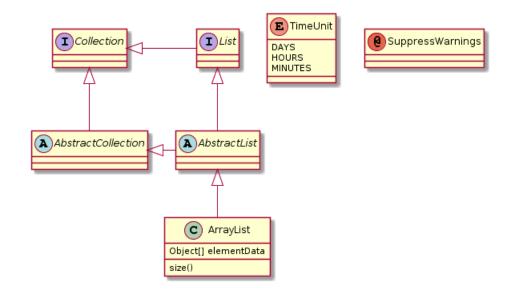

3.10 抽象类和接口 3 类图

# 3.10 抽象类和接口

用关键字"abstract" 或"abstract class" 来定义抽象类。抽象类用斜体显示。也可以使用interface, annotation 和 enum 关键字。

### @startuml

```
abstract class AbstractList
abstract AbstractCollection
interface List
interface Collection
List < | -- AbstractList
Collection < | -- AbstractCollection
Collection < | - List
AbstractCollection < - AbstractList
AbstractList < | -- ArrayList
class ArrayList {
Object[] elementData
size()
enum TimeUnit {
DAYS
HOURS
MINUTES
annotation SuppressWarnings
```

3.11 使用非字母字符 3 类图

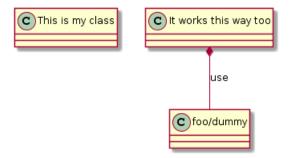

# 3.11 使用非字母字符

如果你想在类(或者枚举)的显示中使用非字母符号,你可以:

- 在类的定义中使用 as 关键字
- 在类名旁边加上 ""

@startuml
class "This is my class" as class1
class class2 as "It works this way too"

class2 \*-- "foo/dummy" : use
@enduml

# 3.12 Hide attributes, methods...

You can parameterize the display of classes using the hide/show command.

The basic command is: hide empty members. This command will hide attributes or methods if they are empty.

Instead of empty members, you can use:

- empty fields or empty attributes for empty fields,
- empty methods for empty methods,
- fields or attributes which will hide fields, even if they are described,
- methods which will hide methods, even if they are described,
- members which will hide fields and methods, even if they are described,
- circle for the circled character in front of class name,
- stereotype for the stereotype.

You can also provide, just after the hide or show keyword:

- class for all classes,
- interface for all interfaces,
- enum for all enums,
- <<foo1>> for classes which are stereotyped with foo1,
- an existing class name.

You can use several show/hide commands to define rules and exceptions.

### @startum1

```
class Dummy1 {
+myMethods()
}

class Dummy2 {
+hiddenMethod()
}

class Dummy3 <<Serializable>> {
String name
}

hide members
hide <<Serializable>> circle
show Dummy1 methods
show <<Serializable>> fields
```

3.13 Hide classes 3 类图

### 3.13 Hide classes

You can also use the show/hide commands to hide classes.

This may be useful if you define a large !included file, and if you want to hide come classes after file inclusion.

```
@startuml
class Foo1
class Foo2
Foo2 *-- Foo1
hide Foo2
@enduml
```

# 3.14 Use generics

You can also use bracket < and > to define generics usage in a class.

```
class Foo<? extends Element> {
int size()
}
Foo *- Element
```

@enduml

@startum1

# 3.15 Specific Spot

Usually, a spotted character (C, I, E or A) is used for classes, interface, enum and abstract classes. But you can define your own spot for a class when you define the stereotype, adding a single character and a color, like in this example:

```
@startum1
```

```
class System << (S,#FF7700) Singleton >>
class Date << (D,orchid) >>
Gendum1
```

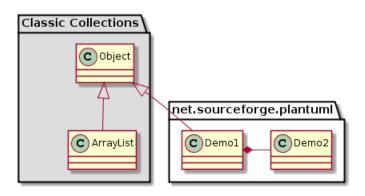

3 类图 3.16 Packages

### 3.16**Packages**

You can define a package using the package keyword, and optionally declare a background color for your package (Using a html color code or name).

Note that package definitions can be nested.

```
@startum1
package "Classic Collections" #DDDDDD {
Object < | -- ArrayList
package net.sourceforge.plantuml {
Object < | -- Demo1
Demo1 *- Demo2
@enduml
```

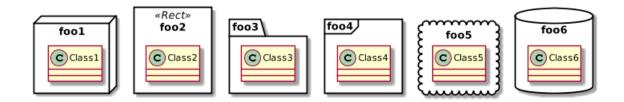

### 3.17Packages style

There are different styles available for packages.

You can specify them either by setting a default style with the command: skinparam packageStyle, or by using a stereotype on the package:

```
@startum1
scale 750 width
package foo1 <<Node>> {
class Class1
package foo2 <<Rect>> {
class Class2
package foo3 <<Folder>> {
class Class3
package foo4 <<Frame>> {
class Class4
package foo5 <<Cloud>> {
class Class5
package foo6 <<Database>> {
class Class6
@enduml
```

3.18 Namespaces 3 类图

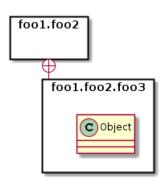

You can also define links between packages, like in the following example:

# skinparam packageStyle rect package foo1.foo2 { } package foo1.foo2.foo3 { class Object }

foo1.foo2 +-- foo1.foo2.foo3

@enduml

@startum1

### 3.18 Namespaces

In packages, the name of a class is the unique identifier of this class. It means that you cannot have two classes with the very same name in different packages.

In that case, you should use namespaces instead of packages.

You can refer to classes from other namespaces by fully qualify them. Classes from the default namespace are qualified with a starting dot.

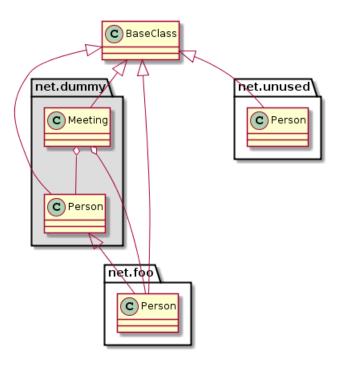

Note that you don't have to explicitly create name space : a fully qualified class is automatically put in the right name space.

@startuml

```
class BaseClass
namespace net.dummy #DDDDDDD {
    BaseClass <|-- Person
Meeting o-- Person

    BaseClass <|- Meeting
}
namespace net.foo {
    net.dummy.Person <|- Person
    BaseClass <|-- Person</pre>
```

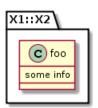

```
net.dummy.Meeting o-- Person
BaseClass < | -- net.unused.Person
@enduml
```

### 3.19 Automatic namespace creation

You can define another separator (other than the dot) using the command: set namespaceSeparator ???.

```
@startuml
set namespaceSeparator ::
class X1::X2::foo {
some info
@enduml
```

You can disable automatic package creation using the command set namespaceSeparator none.

@startuml

```
set namespaceSeparator none
class X1.X2.foo {
some info
@enduml
```

# 3.20 Lollipop interface

You can also define lollipops interface on classes, using the following syntax:

- bar ()- foo
- bar ()-- foo
- foo -() bar

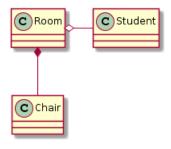

@startuml
class foo
bar () - foo
@enduml

# 3.21 Changing arrows direction

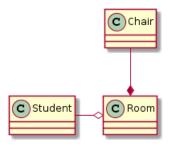

默认类之间采用两个破折号 -- 显示出垂直方向的线. 要得到水平方向的可以像这样使用单破折号(或者点):

@startuml
Room o- Student
Room \*-- Chair
@enduml

You can also change directions by reversing the link:

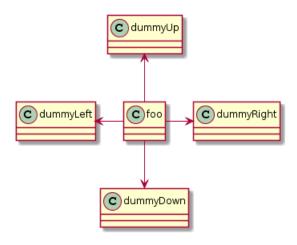

@startuml
Student -o Room
Chair --\* Room
@enduml

3.22 Association classes 类图

It is also possible to change arrow direction by adding left, right, up or down keywords inside the arrow:

```
@startuml
foo -left-> dummyLeft
foo -right-> dummyRight
foo -up-> dummyUp
foo -down-> dummyDown
@enduml
```

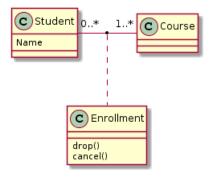

You can shorten the arrow by using only the first character of the direction (for example, -dinstead of -down-) or the two first characters (-do-).

Please note that you should not abuse this functionality: Graphviz gives usually good results without tweaking.

### 3.22Association classes

You can define association class after that a relation has been defined between two classes, like in this example:

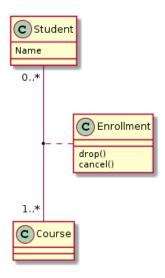

```
@startuml
class Student {
Name
Student "0..*" - "1..*" Course
(Student, Course) .. Enrollment
class Enrollment {
drop()
cancel()
@enduml
```

You can define it in another direction:

3.23 Skinparam 3 类图

```
@startuml
class Student {
Name
}
Student "0..*" -- "1..*" Course
(Student, Course) . Enrollment
class Enrollment {
drop()
cancel()
}
@enduml
```

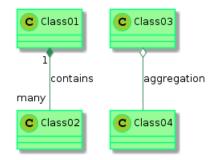

# 3.23 Skinparam

You can use the skinparam command to change colors and fonts for the drawing. You can use this command:

- In the diagram definition, like any other commands,
- In an included file,
- In a configuration file, provided in the command line or the ANT task.

## @startuml

```
skinparam class {
BackgroundColor PaleGreen
ArrowColor SeaGreen
BorderColor SpringGreen
}
skinparam stereotypeCBackgroundColor YellowGreen
Class01 "1" *-- "many" Class02 : contains
Class03 o-- Class04 : aggregation
@enduml
```

# 3.24 Skinned Stereotypes

You can define specific color and fonts for stereotyped classes.

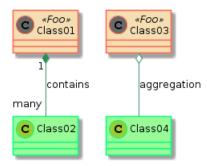

### @startum1

```
skinparam class {
BackgroundColor PaleGreen
ArrowColor SeaGreen
BorderColor SpringGreen
BackgroundColor<Foo>> Wheat
BorderColor<Foo>> Tomato
}
skinparam stereotypeCBackgroundColor YellowGreen
skinparam stereotypeCBackgroundColor<Foo >> DimGray

ClassO1 <<Foo>>
ClassO3 <<Foo>>
ClassO3 "1" *-- "many" ClassO2 : contains

ClassO3 o-- ClassO4 : aggregation

@enduml
```

# 3.25 Color gradient

It's possible to declare individual color for classes or note using the notation.

You can use either standard color name or RGB code.

You can also use color gradient in background, with the following syntax: two colors names separated either by:

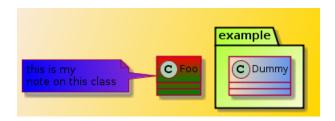

- |,
- /.
- \,
- or -

depending the direction of the gradient.

For example, you could have:

3.26 Help on layout 类图

# @startuml skinparam backgroundcolor AntiqueWhite/Gold skinparam classBackgroundColor Wheat | CornflowerBlue class Foo #red-green note left of Foo #blue\9932CC this is my note on this class end note package example #GreenYellow/LightGoldenRodYellow { class Dummy @enduml

### 3.26Help on layout

Sometimes, the default layout is not perfect...

You can use together keyword to group some classes together: the layout engine will try to group them (as if they were in the same package).

You can also use hidden links to force the layout.

### @startum1

```
class Bar1
class Bar2
together {
class Together1
class Together2
class Together3
Together1 - Together2
Together2 - Together3
Together2 -[hidden]--> Bar1
Bar1 -[hidden] > Bar2
```

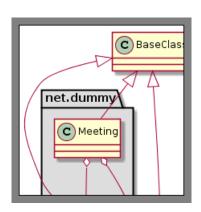

3.27 拆分大文件 3 类图

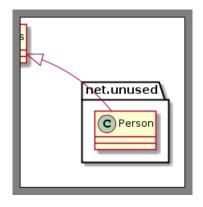

# 3.27 拆分大文件

有些情况下,会有一些很大的图片文件。

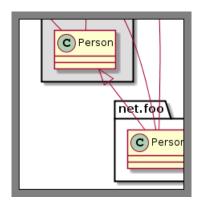

可以用"page (hpages)x(vpages)" 这个命令把生成的图片文件拆分成若干个文件。hpages 用来表示水平方向页面数, and vpages 用来表示垂直方面页面数。你也可以使用特定的皮肤设定来给分页添加边框(见例子)

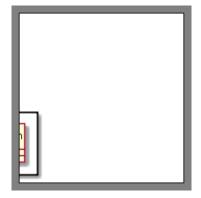

```
@startuml
' Split into 4 pages
page 2x2
skinparam pageMargin 10
skinparam pageExternalColor gray
skinparam pageBorderColor black
class BaseClass
namespace net.dummy #DDDDDD {
.BaseClass < | -- Person
Meeting o-- Person
.BaseClass < | - Meeting
namespace net.foo {
net.dummy.Person <|- Person
.BaseClass < | -- Person
net.dummy.Meeting o-- Person
BaseClass < | -- net.unused.Person
@enduml
```

3.27 拆分大文件 3 类图

# 4 活动图

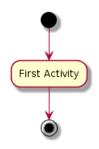

# 4.1 简单活动

使用 (\*) 作为活动图的开始点和结束点。 有时, 你可能想用 (\*top) 强制开始点位于图示的顶端。 使用 --> 绘制箭头。

@startum1

(\*) --> "First Activity"
"First Activity" --> (\*)

@enduml

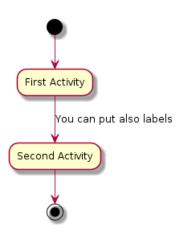

# 4.2 箭头上的标签

默认情况下,箭头开始于最接近的活动。 可以用 [和]放在箭头定义的后面来添加标签。

### @startum1

(\*) --> "First Activity"
-->[You can put also labels] "Second Activity"
--> (\*)

@enduml

# 4.3 改变箭头方向

你可以使用 -> 定义水平方向箭头,还可以使用下列语法强制指定箭头的方向:

- -down-> (default arrow)
- -right-> or ->

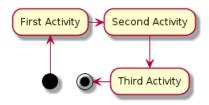

4.4 分支 4 活动图

- -left->
- -up->

### @startum1

(\*) -up-> "First Activity"
-right-> "Second Activity"
--> "Third Activity"
-left-> (\*)

@enduml

# 4.4 分支

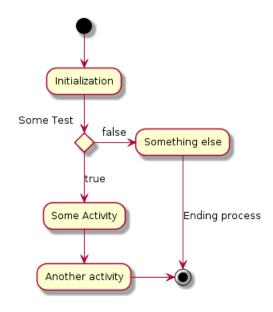

你可以使用关键字 if/then/else 创建分支。

### @startuml

(\*) --> "Initialization"

if "Some Test" then
-->[true] "Some Activity"
--> "Another activity"
-right-> (\*)
else
->[false] "Something else"
-->[Ending process] (\*)
endif

### @enduml

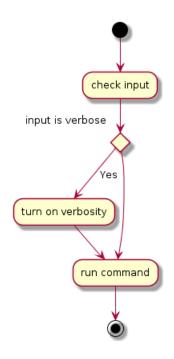

不过,有时你可能需要重复定义同一个活动:

@startum1
(\*) --> "check input"
If "input is verbose" then
--> [Yes] "turn on verbosity"

4.5 更多分支 4 活动图

```
--> "run command"
else
--> "run command"
Endif
-->(*)
@enduml
```

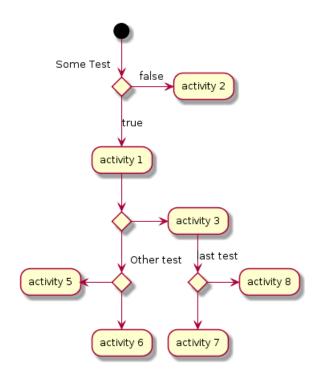

# **4.5** 更多分支

默认情况下,一个分支连接上一个最新的活动,但是也可以使用 if 关键字进行连接。还可以嵌套定义分支。

### @startum1

```
(*) --> if "Some Test" then
-->[true] "activity 1"
if "" then
\rightarrow "activity 3" as a3
else
if "Other test" then
-left-> "activity 5"
--> "activity 6"
endif
endif
else
->[false] "activity 2"
endif
a3 --> if "last test" then
--> "activity 7"
else
-> "activity 8"
endif
```

4.6 同步 4 活动图

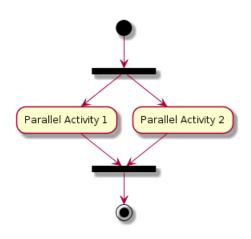

# 4.6 同步

你可以使用"=== code ==="来显示同步条。

@startum1

(\*) --> ===B1=== --> "Parallel Activity 1" --> ===B2=== ===B1=== --> "Parallel Activity 2" --> ===B2===

@enduml

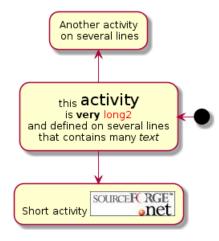

# 4.7 长的活动描述

定义活动时可以用  $\n$  来定义跨越多行的描述。 还可以用  $\n$  关键字给活动起一个短的别名。这个别名可以在接下来的图示定义中使用。 4.8 注释 4 活动图

@startuml
(\*) -left-> "this <size:20>activity</size>
is <b>very</b> <color:red>long2</color>
and defined on several lines
that contains many <i>text</i>" as A1

-up-> "Another activity\n on several lines"

A1 --> "Short activity <img:sourceforge.jpg>" @enduml

# 4.8 注释

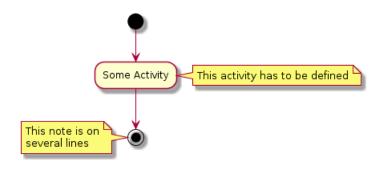

你可以在活动定义之后用 note left, note right, note top or note bottom, 命令给活动添加注释。

如果想给开始点添加注释,只需把注释的定义放在活动图最开始的地方即可。 也可以用关键字 endnote 定义多行注释。

### @startuml

(\*) --> "Some Activity"
note right: This activity has to be defined
"Some Activity" --> (\*)
note left
This note is on
several lines
end note

### @enduml

# 4.9 分区

用关键字 partition 定义分区,还可以设置背景色 (用颜色名或者颜色值)。

4.10 显示参数 4 活动图

定义活动的时候,它自动被放置到最新的分区中。 用}结束分区的定义。

### @startuml

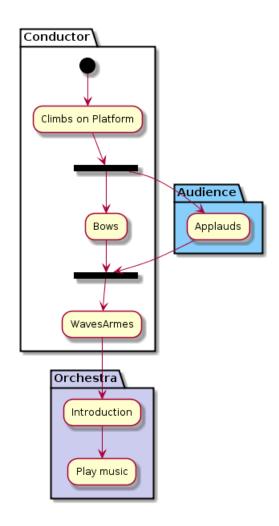

```
partition Conductor {
(*) --> "Climbs on Platform"
--> === S1 ===
--> Bows
}

partition Audience #LightSkyBlue {
=== S1 === --> Applauds
}

partition Conductor {
Bows --> === S2 ===
--> WavesArmes
Applauds --> === S2 ===
}

partition Orchestra #CCCCEE {
WavesArmes --> Introduction
--> "Play music"
}
```

@enduml

# 4.10 显示参数

用 skinparam 命令修改字体和颜色。

4.11 八边形活动 4 活动图

如下场景可用:

- 在图示定义中
- 在引入的文件中
- 在命令行或 ANT 任务提供的配置文件中。

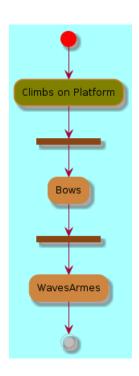

还可以为构造类型指定特殊颜色和字体。

### @startum1

```
skinparam backgroundColor #AAFFFF
skinparam activity {
StartColor red
BarColor SaddleBrown
EndColor Silver
BackgroundColor Peru
BackgroundColor << Begin >> Olive
BorderColor Peru
FontName Impact
}

(*) --> "Climbs on Platform" << Begin >>
--> == S1 ===
--> Bows
--> == S2 ===
--> WavesArmes
--> (*)
```

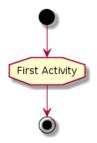

### @enduml

# **4.11** 八边形活动

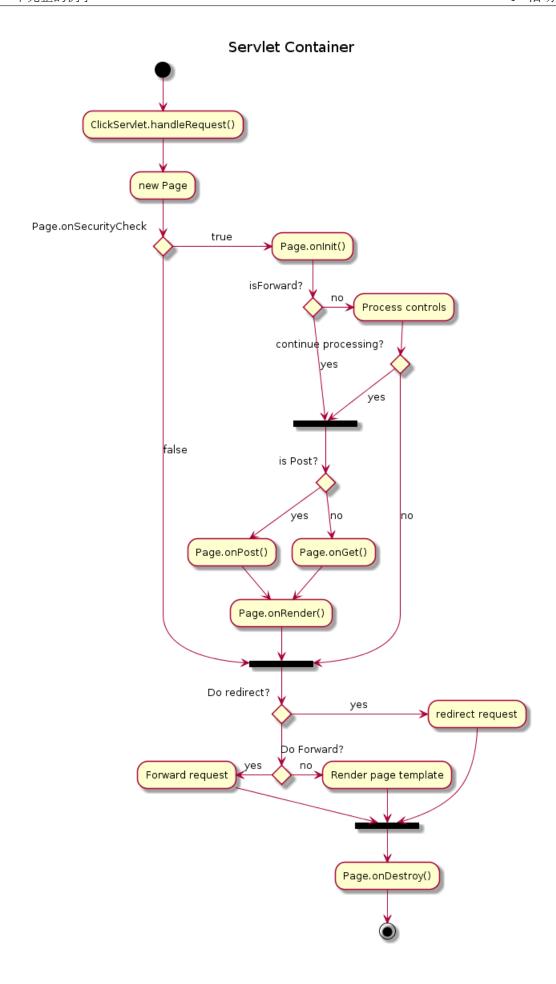

可用用 skinparam activityShape octagon 命令将活动的外形改为八边形。

# @startuml 'Default is skinparam activityShape roundBox skinparam activityShape octagon (\*) --> "First Activity" "First Activity" --> (\*)

# 4.12 一个完整的例子

```
@startuml
title Servlet Container
(*) --> "ClickServlet.handleRequest()"
--> "new Page"
if "Page.onSecurityCheck" then
->[true] "Page.onInit()"
if "isForward?" then
->[no] "Process controls"
if "continue processing?" then
-->[yes] ===RENDERING===
else
-->[no] ===REDIRECT_CHECK===
endif
else
-->[yes] ===RENDERING===
if "is Post?" then
-->[yes] "Page.onPost()"
--> "Page.onRender()" as render
--> ===REDIRECT_CHECK===
else
-->[no] "Page.onGet()"
--> render
endif
-->[false] ===REDIRECT_CHECK===
{\tt endif}
if "Do redirect?" then
->[yes] "redirect request"
--> ==BEFORE_DESTROY===
else
if "Do Forward?" then
-left->[yes] "Forward request"
--> ==BEFORE_DESTROY===
-right->[no] "Render page template"
--> ==BEFORE_DESTROY===
endif
endif
--> "Page.onDestroy()"
-->(*)
```

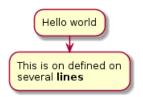

# 活动图 (新语法)

当前活动图 (activity diagram) 的语法有诸多限制和缺点,比如代码难以维护。 所以从 V7947 开始提出一种全新的、更好的语法格式和软件实现供用户使用 (beta 版)。 就像序列图一样,新的软件实现的另一个优点是它不再依赖与 Graphviz。 新的语法将会替换旧的语法。然而考虑到兼容性,旧的语法仍被能够使用以确保向前兼容。 但是我们鼓励用户使用新的语法格式。

### 简单活动图 5.1

活动标签 (activity label) 以冒号开始,以分号结束。 文本格式支持 creole wiki 语法。 活动默认安装它们定义的顺序就行连接。

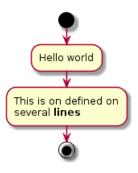

@startuml :Hello world; :This is on defined on several \*\*lines\*\*; @enduml

### 开始/结束 5.2

你可以使用关键字 start 和 stop 表示图示的开始和结束。

@startuml start :Hello world; :This is on defined on several \*\*lines\*\*; stop @enduml

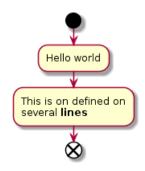

也可以使用 end 关键字。

@startum1 start :Hello world: :This is on defined on several \*\*lines\*\*; end @enduml

5.3 条件语句 5 活动图 (新语法)

# **5.3** 条件语句

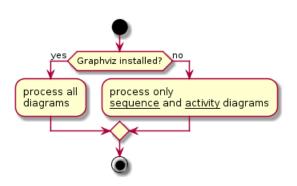

在图示中可以使用关键字 if, then 和 else 设置分支测试。标注文字则放在括号中。

### @startum1

```
start
```

```
if (Graphviz installed?) then (yes)
:process all\ndiagrams;
else (no)
:process only
__sequence__ and __activity__ diagrams;
endif
```

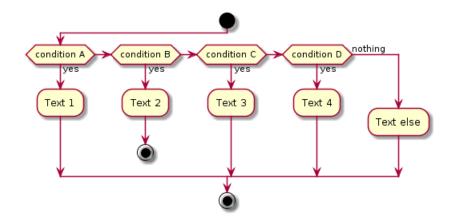

# stop @enduml

也可以使用关键字 elseif 设置多个分支测试。

```
@startuml
start
if (condition A) then (yes)
:Text 1;
elseif (condition B) then (yes)
:Text 2;
stop
elseif (condition C) then (yes)
:Text 3;
elseif (condition D) then (yes)
:Text 4;
else (nothing)
:Text else;
{\tt endif}
stop
@enduml
```

5.4 重复循环 5 活动图 (新语法)

# **5.4** 重复循环

你可以使用关键字 repeat 和 repeatwhile 进行重复循环。

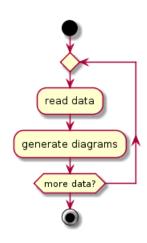

@startuml

start

repeat
:read data;
:generate diagrams;
repeat while (more data?)

stop

@enduml

# **5.5** while 循环

可以使用关键字 while 和 end while 进行 while 循环。

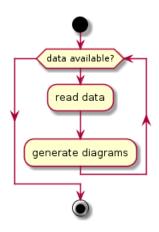

@startuml

start

while (data available?)
:read data;
:generate diagrams;
endwhile

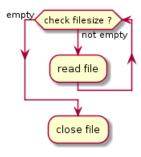

stop

5.6 并行处理 5 活动图 (新语法)

还可以在关键字 endwhile 后添加标注,还有一种方式是使用关键字 is。

```
@startuml
while (check filesize ?) is (not empty)
:read file;
endwhile (empty)
:close file;
@enduml
```

# 5.6 并行处理

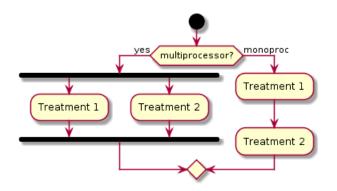

你可以使用关键字 fork, fork again 和 end fork 表示并行处理。

### @startuml

### start

```
if (multiprocessor?) then (yes)
fork
:Treatment 1;
fork again
:Treatment 2;
end fork
else (monoproc)
:Treatment 1;
:Treatment 2;
endif
```

5.7 注释 5 活动图 (新语法)

# 5.7 注释

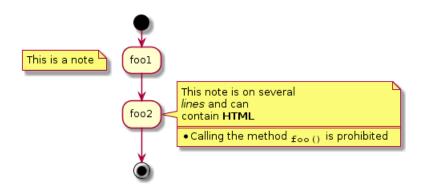

文本格式支持 creole wiki 语法。

A note can be floating, using floating keyword.

### @startuml

```
start
:foo1;
floating note left: This is a note
:foo2;
note right
This note is on several
//lines// and can
contain <b>HTML</b>
====
* Calling the method ""foo()"" is prohibited
end note
stop
```

### @enduml

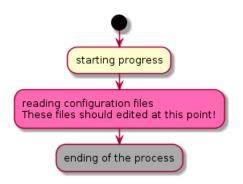

# 5.8 颜色

你可以为活动 (activity) 指定一种颜色。

### @startuml

start
:starting progress;
#HotPink:reading configuration files
These files should edited at this point!;
#AAAAAAA:ending of the process;

5.9 箭头 5 活动图 (新语法)

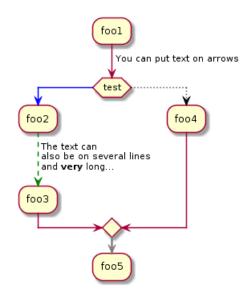

# 5.9 箭头

使用 -> 标记, 你可以给箭头添加文字或者修改箭头颜色。

It's also possible to have dotted, dashed, bold or hidden arrows.

```
@startuml
:foo1;
-> You can put text on arrows;
if (test) then
-[#blue]->
:foo2;
-[#green,dashed]-> The text can
also be on several lines
and **very** long...;
:foo3;
else
-[#black,dotted]->
:foo4;
endif
-[#gray,bold]->
:foo5;
@enduml
```

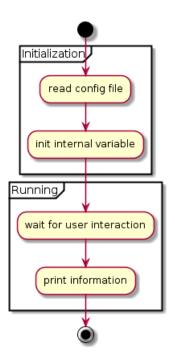

# 5.10 组合 (grouping)

通过定义分区 (partition), 你可以把多个活动组合 (group) 在一起。

@startuml
start
partition Initialization {
:read config file;

```
:init internal variable;
}
partition Running {
:wait for user interaction;
:print information;
}
stop
@enduml
```

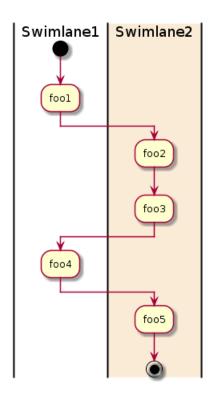

# 5.11 泳道 (Swimlanes)

你可以使用管道符 | 来定义泳道。 还可以改变泳道的颜色。

```
@startuml
|Swimlane1|
start
:foo1;
|#AntiqueWhite|Swimlane2|
:foo2;
:foo3;
|Swimlane1|
:foo4;
|Swimlane2|
:foo5;
stop
@enduml
```

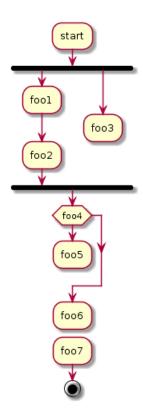

5.12 分离 (detach) 5 活动图 (新语法)

# 5.12 分离 (detach)

可以使用关键字 detach 移除箭头。

@startuml :start; fork :foo1; :foo2; fork again :foo3; detach endfork if (foo4) then :foo5;  ${\tt detach}$ endif :foo6;  ${\tt detach}$ :foo7; stop @enduml

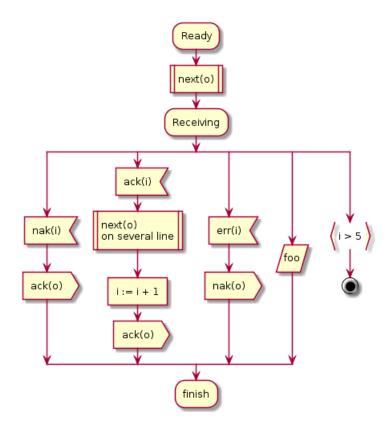

# 5.13 特殊领域语言 (SDL)

通过修改活动标签最后的分号分隔符(;),可以为活动设置不同的形状。

- |
- <
- >
- /
- ]
- }

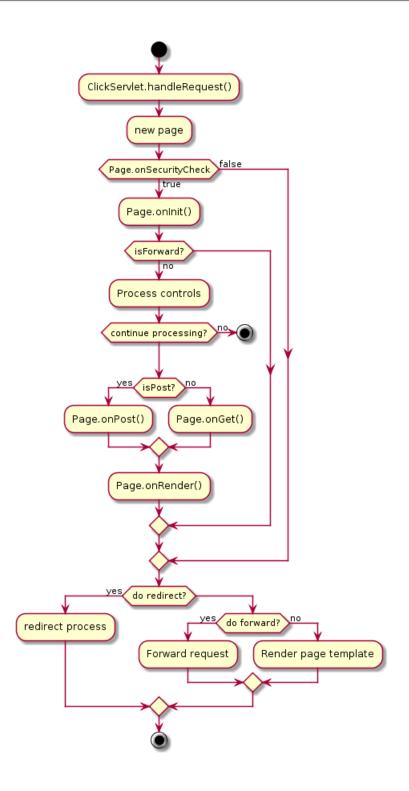

```
@startuml
:Ready;
:next(o)|
:Receiving;
split
:nak(i)<
:ack(o)>
split again
:ack(i)<
:next(o)
on several line|
:i := i + 1]
:ack(o)>
split again
:err(i)<
:nak(o)>
split again
:foo/
split again
:i > 5}
stop
end split
:finish;
@enduml
```

5.14 一个完整的例子 5 活动图 (新语法)

# 5.14 一个完整的例子

```
@startuml
start
:ClickServlet.handleRequest();
:new page;
if (Page.onSecurityCheck) then (true)
:Page.onInit();
if (isForward?) then (no)
:Process controls;
if (continue processing?) then (no)
stop
{\tt endif}
if (isPost?) then (yes)
:Page.onPost();
else (no)
:Page.onGet();
endif
:Page.onRender();
{\tt endif}
else (false)
endif
if (do redirect?) then (yes)
:redirect process;
else
if (do forward?) then (yes)
:Forward request;
else (no)
:Render page template;
endif
endif
stop
```

# 6 组件图

# 6.1 组件

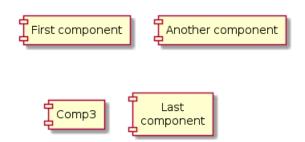

组件必须用中括号括起来。

还可以使用关键字 component 定义一个组件。并且可以用关键字 as 给组件定义一个别名。这个别名可以在稍后定义关系的时候使用。

#### @startuml

[First component]
[Another component] as Comp2
component Comp3
component [Last\ncomponent] as Comp4

#### @enduml

# 6.2 接口

接口可以使用()来定义(因为这个看起来像个圆)。

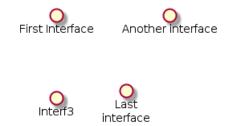

还可以使用关键字 interface 关键字来定义接口。并且还可以使用关键字 as 定义一个别名。这个别名可以在稍后定义关系的时候使用。

我们稍后可以看到,接口的定义是可选的。

#### @startuml

() "First Interface"
() "Another interface" as Interf2
interface Interf3
interface "Last\ninterface" as Interf4

#### @enduml

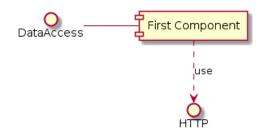

# 6.3 基础的示例

元素之间可以使用虚线 (..)、直线 (--)、箭头 (-->) 进行连接。

#### @startum1

DataAccess - [First Component]
[First Component] ..> HTTP : use

6.4 使用注释 6 组件图

# 6.4 使用注释

你可以使用 note left of, note right of, note top of, note bottom of 等关键字定义相对于对象位置的注释。

也可以使用关键字 note 单独定义注释, 然后使用虚线 (...) 将其连接到其他对象。

#### @startum1

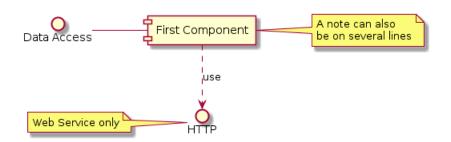

```
interface "Data Access" as DA

DA - [First Component]
[First Component] ..> HTTP : use

note left of HTTP : Web Service only

note right of [First Component]
A note can also
be on several lines
end note
```

#### @enduml

# **6.5** 组合组件

你可以使用多个关键字将组件和接口组合在一起。

- package
- node
- folder
- frame
- cloud
- database

# @startuml

```
package "Some Group" {
HTTP - [First Component]
[Another Component]
}
node "Other Groups" {
FTP - [Second Component]
```

6.6 改变箭头方向 6 组件图

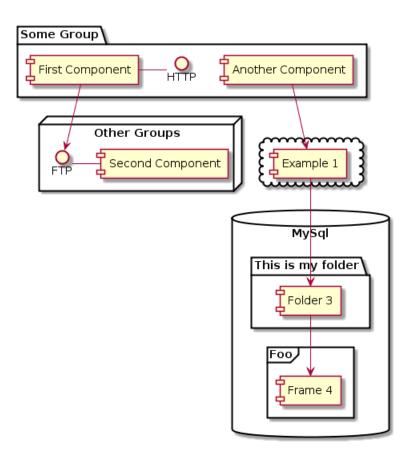

```
[First Component] --> FTP
}

cloud {
[Example 1]
}

database "MySql" {
folder "This is my folder" {
[Folder 3]
}
frame "Foo" {
[Frame 4]
}
}

[Another Component] --> [Example 1]
[Example 1] --> [Folder 3]
[Folder 3] --> [Frame 4]
```

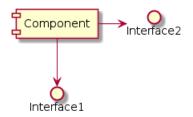

@enduml

# 6.6 改变箭头方向

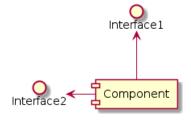

默认情况下,对象之间用 --连接,并且连接是竖直的。不过可以使用一个横线或者点设置水平方向的连接,就行这样:

@startuml
[Component] --> Interface1
[Component] -> Interface2
@enduml

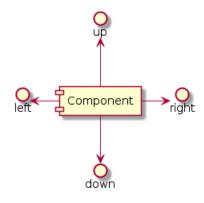

# 也可以使用反向连接:

@startuml
Interface1 <-- [Component]
Interface2 <- [Component]
@enduml</pre>

还可以使用关键字 left, right, up or down 改变箭头方向。

@startuml
[Component] -left-> left
[Component] -right-> right
[Component] -up-> up
[Component] -down-> down
@enduml

允许使用方向单词的首字母或者前两个字母表示方向 (例如 -d-, -do-, -down-都是等价的)。请不要乱用这些功能: *Graphviz*(PlantUML 的后端引擎) 不喜欢这个样子。

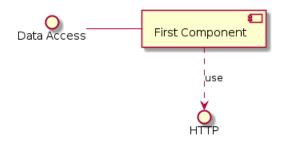

# 6.7 使用 UML2 标记符

命令 skinparam componentStyle uml2 可以切换到 UML2 标记符。

@startuml
skinparam componentStyle uml2
interface "Data Access" as DA

DA - [First Component]
[First Component] ..> HTTP : use

6.8 不同的颜色表示 6 组件图

# 6.8 不同的颜色表示

你可以在声明一个组件时加上颜色的声明。

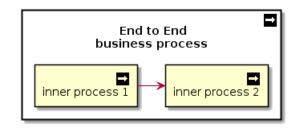

```
@startuml
component [Web Server] #Yellow
@enduml
```

# 6.9 Using Sprite in Stereotype

You can use sprites within stereotype components.

```
@startum1
sprite $businessProcess [16x16/16] {
FFFFFFFFFFFFFF
FFFFFFFFFFFFFF
FFFFFFFFFFFF
FFFFFFFFFFFFF
FFFFFFFFFFFFFF
FFFFFFFFF00FFFF
FF00000000000FFF
FF00000000000FF
FF00000000000FFF
FFFFFFFFFOOFFFF
FFFFFFFFFFFFF
FFFFFFFFFFFFF
FFFFFFFFFFFFFF
FFFFFFFFFFFF
FFFFFFFFFFFFF
FFFFFFFFFFFFFF
rectangle " End to End\nbusiness process" <<$businessProcess>> {
rectangle "inner process 1" <<$businessProcess>> as src
rectangle "inner process 2" <<$businessProcess>> as tgt
src -> tgt
@enduml
```

6.10 显示参数 6 组件图

#### 显示参数 6.10

可以使用命令 skinparam 改变字体和颜色。 你可以在如下场景使用这些命令:

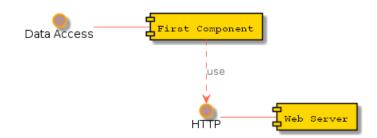

- 在图示的定义中,
- 在包含进来的文件中,
- 在命令行或者 ANT 任务提供的配置文件中。

可以为构造类型和接口定义特殊的颜色和字体。

```
@startuml
```

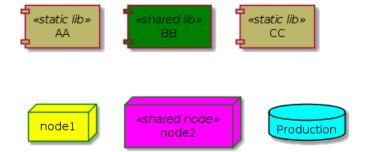

@enduml

```
skinparam interface {
backgroundColor RosyBrown
borderColor orange
skinparam component {
FontSize 13
BackgroundColor << Apache>> Red
BorderColor << Apache>> #FF6655
FontName Courier
BorderColor black
{\tt BackgroundColor}\ {\tt gold}
ArrowFontName Impact
ArrowColor #FF6655
ArrowFontColor #777777
() "Data Access" as DA
DA - [First Component]
[First Component] ..> () HTTP : use
HTTP - [Web Server] << Apache >>
```

```
@startuml
[AA] <<static lib>>
[BB] <<shared lib>>
[CC] <<static lib>>
node node1
node node2 <<shared node>>
database Production
\verb|skinparam| component {|} \{
backgroundColor<<static lib>> DarkKhaki
backgroundColor << shared lib>> Green
skinparam node {
borderColor Green
backgroundColor Yellow
backgroundColor << shared node>> Magenta
skinparam databaseBackgroundColor Aqua
```

6.10 显示参数 6 组件图

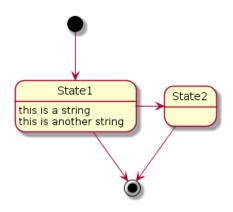

# 7 状态图

# 7.1 简单状态

```
使用([*])开始和结束状态图。
使用 --> 添加箭头。
```

@startum1

```
[*] --> State1
State1 --> [*]
State1 : this is a string
State1 : this is another string
State1 -> State2
State2 --> [*]
@enduml
```

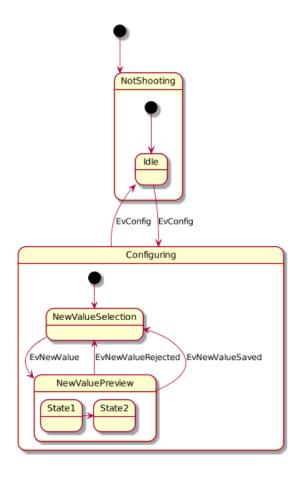

# 7.2 合成状态

一个状态也可能是合成的,必须使用关键字 state 和花括号来定义合成状态。

```
@startuml
scale 350 width
[*] --> NotShooting
state NotShooting {
[*] --> Idle
Idle --> Configuring : EvConfig
Configuring --> Idle : EvConfig
state Configuring {
[*] --> NewValueSelection
NewValueSelection --> NewValuePreview : EvNewValue
NewValuePreview --> NewValueSelection : EvNewValueRejected NewValuePreview --> NewValueSelection : EvNewValueSaved
state NewValuePreview {
State1 -> State2
@enduml
```

7.3 长名字 7 状态图

# 7.3 长名字

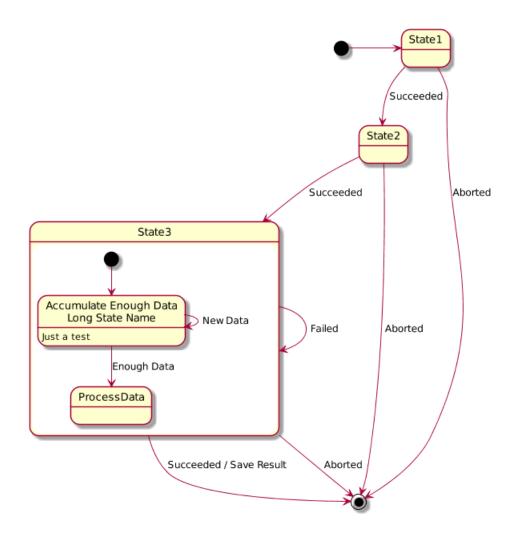

也可以使用关键字 state 定义长名字状态。

```
scale 600 width

[*] -> State1
State1 --> State2 : Succeeded
State1 --> [*] : Aborted
State2 --> State3 : Succeeded
State2 --> [*] : Aborted
state State3 {
    state "Accumulate Enough Data\nLong State Name" as long1
long1 : Just a test
[*] --> long1
long1 --> long1 : New Data
long1 --> ProcessData : Enough Data
}
State3 --> State3 : Failed
State3 --> [*] : Succeeded / Save Result
State3 --> [*] : Aborted

@endum1
```

7.4 并发状态 7 状态图

# 7.4 并发状态

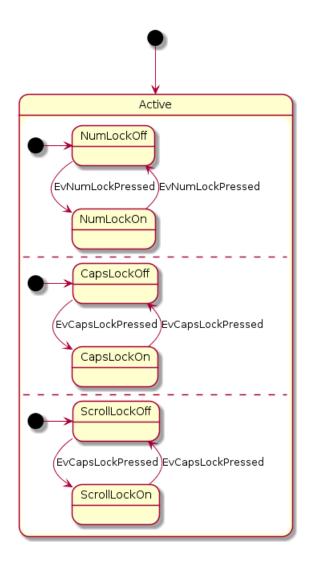

@enduml

用 --作为分隔符来合成并发状态。

```
@startuml
[*] --> Active

state Active {
  [*] -> NumLockOff
NumLockOff --> NumLockOn : EvNumLockPressed
NumLockOn --> NumLockOff : EvNumLockPressed
--
  [*] -> CapsLockOff
CapsLockOff --> CapsLockOn : EvCapsLockPressed
CapsLockOn --> CapsLockOff : EvCapsLockPressed
--
  [*] -> ScrollLockOff
ScrollLockOff --> ScrollLockOn : EvCapsLockPressed
ScrollLockOn --> ScrollLockOff : EvCapsLockPressed
}
```

7.5 箭头方向 7 状态图

# 7.5 箭头方向

使用 -> 定义水平箭头, 也可以使用下列格式强制设置箭头方向:

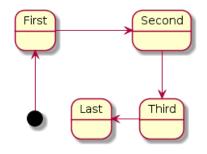

- -down-> (default arrow)
- -right-> or ->
- -left->
- -up->

# @startuml

[\*] -up-> First
First -right-> Second
Second --> Third
Third -left-> Last

#### ${\tt @enduml}$

7.6 注释 7 状态图

可以用首字母缩写或者开始的两个字母定义方向 (如, -d-, -down-n -do-是完全等价的)。请不要滥用这些功能,Graphviz 不喜欢这样。

# 7.6 注释

可以用 note left of, note right of, note top of, note bottom of 关键字来定义注释。 还可以定义多行注释。

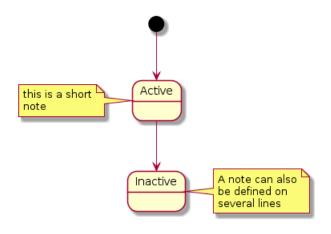

@startum1

[\*] --> Active Active --> Inactive

note left of Active : this is a short\nnote

note right of Inactive A note can also be defined on several lines end note

@enduml

以及浮动注释。

@startuml

state foo note "This is a floating note" as N1  $\,$ 

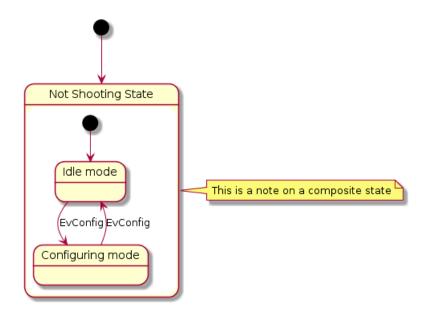

7.7 更多注释 7.7 状态图

# 7.7 更多注释

可以在合成状态中放置注释。

#### @startum1

```
[*] --> NotShooting
state "Not Shooting State" as NotShooting {
state "Idle mode" as Idle
state "Configuring mode" as Configuring
[*] --> Idle
Idle --> Configuring : EvConfig
Configuring --> Idle : EvConfig
}
note right of NotShooting : This is a note on a composite state
@enduml
```

# 7.8 显示参数

使用 skinparam 命令改变字体和颜色。 在如下场景使用:

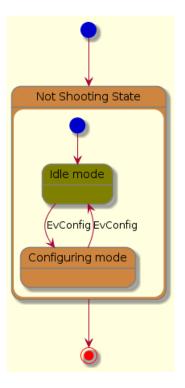

- 在图示定义中,
- 在包含进来的文件中,
- 在命令行或 ANT 任务提供的配置文件中。

还可以为状态的构造类型指定特殊的字体和颜色。

```
@startuml
skinparam backgroundColor LightYellow
skinparam state {
StartColor MediumBlue
EndColor Red
BackgroundColor Peru
BackgroundColor</wd>
BackgroundColor
State "NotShooting
state "Not Shooting State" as NotShooting {
```

7.8 显示参数 7 状态图

```
state "Idle mode" as Idle <<Warning>>
state "Configuring mode" as Configuring
[*] --> Idle
Idle --> Configuring : EvConfig
Configuring --> Idle : EvConfig
}
NotShooting --> [*]
Genduml
```

#### 对象图 8

# 8.1 对象的定义

使用关键字 object 定义实例。

@startuml object firstObject
object "My Second Object" as o2 @enduml

My Second Object

# 8.2 对象之间的关系

对象之间的关系用如下符号定义:

继承	<	$\Diamond$
合成	*	•
聚合	0	<b>◇</b> —

也可以用".."来代替"--"以使用点线。

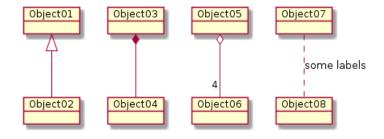

知道了这些规则,就可以画下面的图:

可以用冒号给关系添加标签,标签内容紧跟在冒号之后。

用双引号在关系的两边添加基数。

@startum1 object Object01 object Object02 object Object03 object Object04 object Object05 object Object06 object Object07 object Object08

Object01 < | -- Object02 Object03 \*-- Object04
Object05 o-- "4" Object06 Object07 .. Object08 : some labels @enduml

# 8.3 添加属性

用冒号加属性名的形式声明属性。

@startum1

object user

user : name = "Dummy"

user : id = 123

user name = "Dummy" id = 123

也可以用大括号批量声明属性。

```
@startuml
object user {
name = "Dummy"
id = 123
}
```

@enduml

user name = "Dummy" id = 123

# 8.4 类图中的通用特性

- 可见性
- 定义注释
- 使用包
- 美化输出内容

# 9 通用命令

# 9.1 注释

所有以单引号开头的行 ' 都是注释你也可以使用多行注释, 多行注释以 /' 开头 '/ 结尾。

# 9.2 脚注和标头

你可以使用 header 或 footer 给任何图示添加脚注或标头还可以 (可选) 使用关键字 center, left 或 right 设置脚注或标头位置。也可以定义多行脚注或标头。 还可以在标头或脚注中放置 HTML 语句。

@startuml

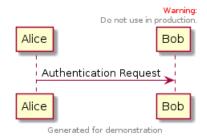

Alice -> Bob: Authentication Request

header

<font color=red>Warning:</font>
Do not use in production.
endheader

center footer Generated for demonstration

@enduml

# 9.3 缩放

你可以用缩放命令来调整生成的图像

你可以指定缩放因子你还可以指定宽度或者高度(像素)你也可以同时指定宽度和高度:图像将被缩放到适合给定的大小。

- scale 1.5
- scale 2/3
- scale 200 width
- scale 200 height
- scale 200\*100
- scale max 300\*200
- scale max 1024 width
- scale max 800 height

@startum1
scale 180\*90
Bob->Alice : hello
@endum1

9.4 标题 (Title) 9 通用命令

# 9.4 标题 (Title)

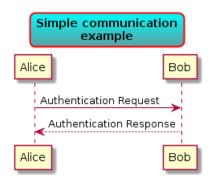

title 关键字用于设置一个标题. 在标题描述中使用 \n 表示换行。 Some skinparam settings are available to put borders on the title.

@startuml
skinparam titleBorderRoundCorner 15
skinparam titleBorderThickness 2
skinparam titleBorderColor red
skinparam titleBackgroundColor Aqua-CadetBlue

title Simple communication\nexample

Alice -> Bob: Authentication Request Bob --> Alice: Authentication Response

@enduml

你可以在标题中使用 creole 格式。 还可以使用关键字 title 和 end title 定义多行标题。

#### @startuml

title
<u>Simple</u> communication example
on <i>several</i> lines and using <back:cadetblue>creole tags</back>

Alice -> Bob: Authentication Request
Bob -> Alice: Authentication Response

@enduml

# Simple communication example on several lines and using creole tags Alice Bob

9.5 Caption 9 通用命令

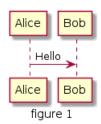

# 9.5 Caption

There is also a caption keyword to put a caption under the diagram.

#### @startum1

caption figure 1
Alice -> Bob: Hello

@enduml

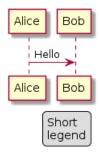

# 9.6 给图表 (diagram) 添加备注

关键字 legend 和 end legend 用于添加备注。 可选项 left, right 和 center 可用于设置标注的对齐方式。

#### @startum1

Alice -> Bob : Hello legend right Short legend endlegend

# 10 Salt

Salt 是 PlantUML 下面的子项目用来帮助用户来设计图形接口. 可以用 @startsalt 关键字,或者使用 @startuml 紧接着下一行使用 salt 关键字.

# 10.1 基本部件

- 一个窗口必须以中括号开头和结尾。接着可以这样定义:
  - 按钮用「和]。
  - 单选按钮用(和)。
  - 复选框用[和]。
  - 用户文字域用 "。

```
@startuml
salt
{
  Just plain text
  [This is my button]
() Unchecked radio
(X) Checked radio
[] Unchecked box
[X] Checked box
"Enter text here "
  This is a droplist
}
@enduml
```

这个工具是用来讨论简单的示例窗口。

# 10.2 使用表格

当在输入关键词 {后, 会自动建立一个表格 当输入 | 说明一个单元格 例子如下

```
@startsalt
{
Login | "MyName "
Password | "**** "
[Cancel] | [ OK ]
}
@endsalt
```

10.3 使用分隔符 10 SALT

Just after the opening bracket, you can use a character to define if you want to draw lines or columns of the grid:

- # To display all vertical and horizontal lines
- ! To display all vertical lines
- To display all horizontal lines
- + To display external lines

```
@startsalt
         | "MyName
Login
Password | "****
[Cancel] | [ OK
@endsalt
```

#### 10.3 使用分隔符

你可以使用几条横线表示分隔符

```
@startsalt
Text1
"Some field"
Note on usage
Another text
[Ok]
@endsalt
```

#### 10.4 Tree widget

To have a Tree, you have to start with {T and to use + to denote hierarchy.

```
0startsalt
{T
+ World
++ America
+++ Canada
+++ USA
++++ New York
++++ Boston
+++ Mexico
++ Europe
+++ Italy
+++ Germany
```

```
++ Africa
@endsalt
```

# **Enclosing brackets**

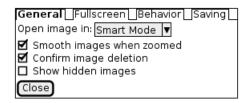

You can define subelements by opening a new opening bracket.

```
@startsalt
              | "
Name
              \mid { (X) public \mid () default \mid () private \mid () protected
Modifiers:
[] abstract | [] final | [] static }
Superclass: | { "java.lang.Object " | [Browse...] }
@endsalt
                        Name
                                   o public O default O private O protected
                                   ☐ abstract ☐ final ☐ static
                        Superclass: <u>java.lang.0bject</u>
                                                       Browse...
```

#### Adding tabs 10.6

You can add tabs using {/ notation. Note that you can use HTML code to have bold text.

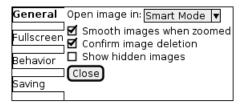

```
@startsalt
{/ <b>General | Fullscreen | Behavior | Saving }
{ Open image in: | ^Smart Mode^ }
[X] Smooth images when zoomed
[X] Confirm image deletion
[ ] Show hidden images
[Close]
}
@endsalt
```

Tab could also be vertically oriented:

10.7 Using menu 10 SALT

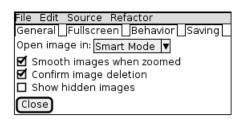

```
@startsalt
{+
{/ <b>General
Fullscreen
Behavior
Saving } |
{
{ Open image in: | ^Smart Mode^ }
[X] Smooth images when zoomed
[X] Confirm image deletion
[] Show hidden images
[Close]
}
}
@endsalt
```

# 10.7 Using menu

You can add a menu by using {\* notation.

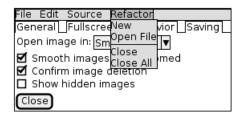

```
@startsalt
{+
{* File | Edit | Source | Refactor }
{/ General | Fullscreen | Behavior | Saving }
{
{ Open image in: | `Smart Mode` }
[X] Smooth images when zoomed
[X] Confirm image deletion
[ ] Show hidden images
}
[Close]
}
@endsalt
```

It is also possible to open a menu:

```
@startsalt
{+
{* File | Edit | Source | Refactor
Refactor | New | Open File | - | Close | Close All }
{/ General | Fullscreen | Behavior | Saving }
{
{ Open image in: | ^Smart Mode^ }
[X] Smooth images when zoomed
[X] Confirm image deletion
[ ] Show hidden images
}
[Close]
}
[Close]
}
Gendsalt
```

10.8 Advanced table 10 SALT

# 10.8 Advanced table

You can use two special notations for table :

- $\bullet$  \* to indicate that a cell with span with left
- . to denotate an empty cell

```
@startsalt
{#
. | Column 2 | Column 3
Row header 1 | value 1 | value 2
Row header 2 | A long cell | *
}
@endsalt
```

	Column 2	Column 3
Row header 1	value 1	value 2
Row header 2	A long ce	

# 11 Creole

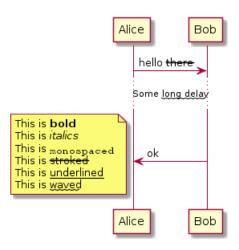

A light Creole engine have been integrated into PlantUML to have a standardized way of defining text style.

All diagrams are now supporting this syntax.

Note that ascending compatibility with HTML syntax is preserved.

# 11.1 Emphasized text

```
@startuml
Alice -> Bob : hello --there--
... Some ~~long delay~~ ...
Bob -> Alice : ok
note left
This is **bold**
This is //italics//
This is ""monospaced""
This is --stroked--
This is __underlined__
This is ~~waved~~
end note
@enduml
```

# 11.2 List

```
@startuml
object demo {
    * Bullet list
    * Second item
    ** Sub item
}

legend
# Numbered list
# Second item
## Sub item
## Another sub item
## Third item
end legend
@enduml
```

- 1. Numbered list
- 2. Second item
  - 1. Sub item
  - 2. Another sub item
- 3. Third item

# 11.3 Escape character

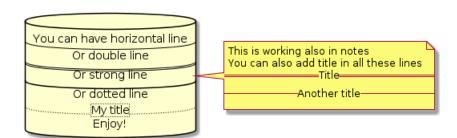

You can use the tilde ~ to escape special creole characters.

```
@startum1
object demo {
This is not ~__underscored__.
This is not ~""monospaced"".
@enduml
```

# 11.4 Horizontal lines

```
@startum1
database DB1 as "
You can have horizontal line
Or double line
----
Or strong line
Or dotted line
..My title..
Enjoy!
note right
This is working also in notes
You can also add title in all these lines
==Title==
--Another title--
end note
```

11.5 Headings 11 CREOLE

# 11.5 Headings

```
@startuml
usecase UC1 as "
= Extra-large heading
Some text
== Large heading
Other text
=== Medium heading
Information
....
==== Small heading"
@enduml
```

# 11.6 Legacy HTML

Some HTML tags are also working:

- <b> for bold text
- <u> or <u:#AAAAAA> or <u:colorName> for underline
- <i> for italic
- <s> or <s:#AAAAAA> or <s:colorName> for strike text
- <w> or <w:#AAAAAA> or <w:colorName> for wave underline text
- <color:#AAAAAA> or <color:colorName>
- <back:#AAAAAA> or <back:colorName> for background color
- <size:nn> to change font size
- <img:file>: the file must be accessible by the filesystem
- <img:http://url>: the URL must be available from the Internet

#### @startuml

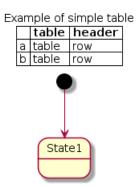

```
:* You can change <color:red>text color</color>
* You can change <back:cadetblue>background color</back>
* You can change <size:18>size</size>
* You use <u>legacy</u> <b>HTML <i>tag</i></b>
* You use <u:red>color</u> <s:green>in HTML</s> <w:#0000FF>tag</w>
----
* Use image : <img:sourceforge.jpg>
:
```

11.7 Table 11 CREOLE

# 11.7 Table

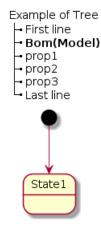

```
@startuml
skinparam titleFontSize 14
title
Example of simple table
|= |= table |= header |
| a | table | row |
| b | table | row |
end title
[[*] --> State1
@enduml
```

# 11.8 Tree

You can use |\_ characters to build a tree.

```
@startuml
skinparam titleFontSize 14
title
Example of Tree
|_ First line
|_ **Bom(Model)**
|_ prop1
|_ prop2
|_ prop3
|_ Last line
end title
[*] --> State1
@enduml
```

# 11.9 Special characters

It's possible to use any unicode characters with &# syntax or <U+XXXX>

11.10 OpenIconic 11 CREOLE

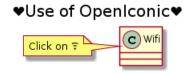

```
Qstartuml usecase foo as "this is ∞ long" usecase bar as "this is also \langle U+221E \rangle long" Qenduml this is \infty long this is also \infty long
```

# 11.10 OpenIconic

OpenIconic is an very nice open source icon set. Those icons have been integrated into the creole parser, so you can use them out-of-the-box.

You can use the following syntax: <&ICON\_NAME>.

@startuml
title: <size:20><&heart>Use of OpenIconic<&heart></size>
class Wifi
note left
Click on <&wifi>
end note
@enduml

The complete list is available on OpenIconic Website, or you can use the following special diagram:

@startuml
listopeniconic
@enduml

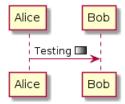

# 11.11 Defining and using sprites

A Sprite is a small graphic element that can be used in diagrams.

In PlantUML, sprites are monochrome and can have either 4, 8 or 16 gray level.

To define a sprite, you have to use a hexadecimal digit between 0 and F per pixel.

Then you can use the sprite using <\$XXX> where XXX is the name of the sprite.

# 11.12 Encoding Sprite

To encode sprite, you can use the command line like:

```
java -jar plantuml.jar -encodesprite 16z foo.png
```

where foo.png is the image file you want to use (it will be converted to gray automatically).

After -encodesprite, you have to specify a format: 4, 8, 16, 4z, 8z or 16z.

The number indicates the gray level and the optional z is used to enable compression in sprite definition.

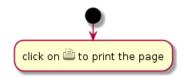

### 11.13 Importing Sprite

You can also launch the GUI to generate a sprite from an existing image.

Click in the menubar then on File/Open Sprite Window.

After copying an image into you clipboard, several possible definitions of the corresponding sprite will be displayed: you will just have to pickup the one you want.

# 11.14 Examples

11.14 Examples 11 CREOLE

```
@startuml
sprite $printer [15x15/8z] NOtH3WOW208HxFz_kMAhj7lHWpa1XC716sz0Pq4MVPEWfBHIuxP3L6kbTcizR8tAhzaqFvXwvFfPEd
start
:click on <$printer> to print the page;
@enduml
```

# Use of sprites ( , \*...) C Example Can have some bug: \* Click on to save

```
@startuml
sprite $bug [15x15/16z] PKzR2iOm2BFMi15p__FEjQEqB1z27aeqCqixa8S4OT7C53cKpsHpaYPDJY_12MHM-BLRyywPhrrlw3qui
sprite $printer [15x15/8z] NOtH3W0W208HxFz_kMAhj7lHWpa1XC716sz0Pq4MVPEWfBHIuxP3L6kbTcizR8tAhzaqFvXwvFfPE
sprite $disk {
444445566677881

Can have some bug : <$bug>
Click on <$disk> to save
note left : The printer \ sprinter \ is available
```

# 12 修改字体和颜色

# 12.1 使用方法

使用 skinparam 命令修改字体和颜色。例如: skinparam backgroundColor yellow

可以在如下场景中使用:

- 在图示的定义中,
- 在包含进来的文件中(见预处理)。
- 在命令行或 ANT 任务提供的配置文件中。

# 12.2 嵌套

为了避免重复,可以使用嵌套的定义。所以下面的定义:

```
skinparam xxxxParam1 value1
skinparam xxxxParam2 value2
skinparam xxxxParam3 value3
skinparam xxxxParam4 value4
完全等价于:
skinparam xxxx {
Param1 value1
Param2 value2
Param3 value3
Param4 value4
```

# 12.3 颜色

既可以使用颜色的标准名字也可以使用 RGB 颜色值。

参数名字	默认	颜色	注释
2 M II 1	值		[44.1]
backgroundColor	white		   页面背景色
activityArrowColor	#A80036		活动图中箭头的颜色
activityBackgroundColor	#FEFECE		活动的背景色
activityBorderColor	#A80036		活动边界的颜色
activityStartColor	black		活动图开始的圆圈的颜色
activityEndColor	black		活动图结束的圆圈的颜色
activityBarColor	black		活动图中同步条的颜色
usecaseArrowColor	#A80036		usecase 图中箭头的颜色
usecaseActorBackgroundColor	#FEFECE		usecase 图中角色头部的颜色
usecaseActorBorderColor	#A80036		usecase 图中角色的边界的颜色
usecaseBackgroundColor	#FEFECE		usecase 的背景色
usecaseBorderColor	#A80036		usecase 图中 usecase 边界的颜色
classArrowColor	#A80036		类图中箭头的颜色
classBackgroundColor	#FEFECE		类图中类、接口、枚举的背景色
classBorderColor	#A80036		类图中类、接口、枚举的边界颜色
packageBackgroundColor	#FEFECE		类图中包的背景色
packageBorderColor	#A80036		类图中包的边界颜色
stereotypeCBackgroundColor	#ADD1B2		类图中圆圈的背景色
stereotypeABackgroundColor	#A9DCDF		类图中抽象类圆圈的背景色
stereotypeIBackgroundColor	#B4A7E5		类图中接口圆圈的背景色
stereotypeEBackgroundColor	#EB937F		类图中枚举圆圈的背景色
componentArrowColor	#A80036		组件图中箭头的颜色
componentBackgroundColor	#FEFECE		组件的背景色
componentBorderColor	#A80036		组件的边界颜色
componentInterfaceBackgroundColor	#FEFECE		组件图中接口的背景色
componentInterfaceBorderColor	#A80036		组件图中接口的边界颜色
noteBackgroundColor	#FBFB77		注释的背景色
noteBorderColor	#A80036		注释的边界颜色
stateBackgroundColor	#FEFECE		状态图中状态的背景色
stateBorderColor	#A80036		状态图中状态的边界颜色
stateArrowColor	#A80036		状态图中箭头的颜色
stateStartColor	black		状态图中开始圆圈的颜色
stateEndColor	black		状态图中结束圆圈的颜色
sequenceArrowColor	#A80036		序列图中箭头的颜色
sequenceActorBackgroundColor	#FEFECE		序列图中角色的头部颜色
sequenceActorBorderColor	#A80036		序列图中角色的边界颜色
sequenceGroupBackgroundColor	#EEEEEE		序列图中 alt/opt/loop 的标头颜色
sequenceLifeLineBackgroundColor	white		序列图中生命线的背景色
sequenceLifeLineBorderColor	#A80036		序列图中生命线的边界的颜色
${\tt sequenceParticipantBackgroundColor}$	#FEFECE		序列图中参与者的背景色
sequenceParticipantBorderColor	#A80036		序列图中参与者的边界颜色

# 12.4 字体的颜色、名字和尺寸

用如下参数改变字体属性: xxxFontColor xxxFontSize and xxxFontName。例如:

skinparam classFontColor red
skinparam classFontSize 10
skinparam classFontName Aapex

还可以改变默认的字体属性,像这样: skinparam defaultFontName。例如:

skinparam defaultFontName Aapex

注意字体名称有很高的系统依赖性,如果想有好的移植性,就不要过度依赖于字体名字。移植性

参数	默认	注释
名字	值	
activityFontColor	black	
activityFontSize	14	m = 14-14-
activityFontStyle	plain	用于活动框
activityFontName	1	
activityArrowFontColor	black	
activityArrowFontSize	13	男工活: 1. 四十 4. 2. 2. 2. 2. 2. 2. 2. 2. 2. 2. 2. 2. 2.
activityArrowFontStyle	plain	用于活动图中的箭头之上的文字
activityArrowFontName	1	
circledCharacterFontColor	black	
circledCharacterFontSize	17	
circledCharacterFontStyle	bold	用于类、枚举等元素的圆圈中的文字
circledCharacterFontName	Courier	
circledCharacterRadius	11	
classArrowFontColor	black	
classArrowFontSize	10	
classArrowFontStyle	plain	用于类图中的箭头之上的文字
classArrowFontName		
classAttributeFontColor	black	
classAttributeFontSize	10	* 如 屋 州 和 子 汁
classAttributeIconSize	10	类的属性和方法
classAttributeFontStyle	plain	
classAttributeFontName		
classFontColor	black

headerFontStyle	plain	用 ] 你大	
headerFontName			

12.5 黑白色 12 修改字体和颜色

# 12.5 黑白色

可以使用 skinparam monochrome true 命令强制使用黑白色进行输出。

@startuml
skinparam monochrome true

actor User

participant "First Class" as A participant "Second Class" as B participant "Last Class" as C

User -> A: DoWork activate A

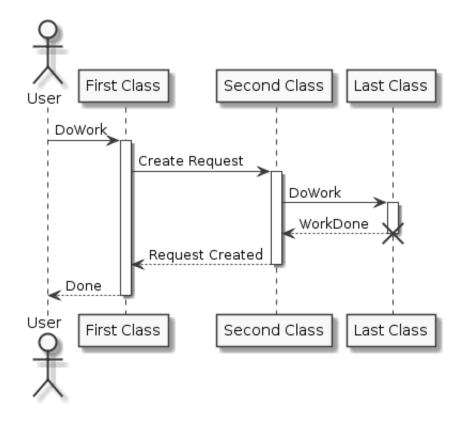

A -> B: Create Request activate B

B -> C: DoWork
activate C
C --> B: WorkDone
destroy C

B --> A: Request Created deactivate B

A --> User: Done deactivate A

@enduml

# 13 预处理

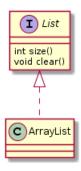

PlantUML 包含少量的预处理功能,该功能对所有类型的图示都可用。 预处理功能跟 C 语言的预处理非常类似,只是把 # 换成! 即可。

## 13.1 引入文件

用!include 指令引入文件。

比如你可能有一个类出现在多个图示中,这时你可以定义一个文件保存该类的描述,然后在其他图示描述文件中引入该文件而不用重复描述这个类。

@startuml
!include List.iuml
List <|.. ArrayList
@enduml</pre>

File List.iuml: interface List List: int size() List: void clear()

文件 List.iuml 可以包含进多个图示描述中,一旦这个文件被修改,所有包含它的图示描述中都会作相应的改动。

A file can be only be included once. If you want to include several times the very same file, you have to use the directive !include\_many instead of !include.

你可以在被引入的文件中声明多个 @startuml/@enduml 文本块,引入该文件时使用!0 语法来指定引入哪个 @startuml/@enduml 文本块,0 是文本块的编号。

举起个例子,!include foo.txt!1 表示 foo.txt 文件中的第二个 @startuml/@enduml 文本块被引入。

You can also put an id to some @startuml/@enduml text block in an included file using @startuml(id=MY\_OWN\_ID) syntax and then include the block adding !MY\_OWN\_ID when including the file, so using something like !include foo.txt!MY\_OWN\_ID.

### **13.2** 通过 URL 引入文件

使用!includeurl 指令可以从 Internet 或 Intranet 引入文件到你的图示中。

你也可以使用!includeurl http://someurl.com/mypath!0 来指定 http://someurl.com/mypath 中引入某个 @startuml/@enduml 文本块, !0 表示第一个。

# 13.3 定义常量

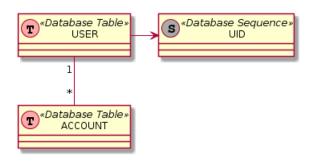

可以使用!define 指令定义常量,就像在 C 语音中定义常量一样,它只能包含字母、下划线或数字,并且不能以数字作为开头。

@startum1

!define SEQUENCE (S,#AAAAAA) Database Sequence!define TABLE (T,#FFAAAA) Database Table

13.4 宏定义 13 预处理

class USER << TABLE >>
class ACCOUNT << TABLE >>
class UID << SEQUENCE >>
USER "1" -- "\*" ACCOUNT
USER -> UID
Gendum1

当然你也可以把所有的常量在一个文件中定义好,然后用!include 指令引入到图示的描述中。常量可以用!undef XXX 指令取消。你也可以在命令行中用 -D 指定常量。

java -jar plantuml.jar -DTITLE="My title" atest1.txt 注意 -D 一定要放在"-jar plantuml.jar"之后。

### 13.4 宏定义

你可以定义带参数的宏。

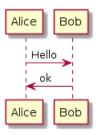

@startum1

!define module(x) component x <<module>>
module(ABC)
module(XYZ)
@enduml

宏可以带有多个参数。

@startuml
!define send(a,b,c) a->b : c
send(Alice, Bob, Hello)
send(Bob, Alice, ok)
@enduml

# 13.5 Adding date and time

You can also expand current date and time using the special variable %date%.

Date format can be specified using format specified in SimpleDataFormat documentation.

```
@startuml
!define ANOTHER_DATE %date[yyyy.MM.dd 'at' HH:mm]%
Title Generated %date% or ANOTHER_DATE
alice -> bob
@endum1
```

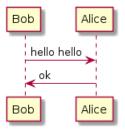

#### Generated Sun Nov 27 16:47:28 UTC 2016 or 2016.11.27 at 16:47

### 13.6 多行宏

可以使用!definelong 和!enddefinelong 定义跨多行的宏。

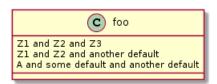

```
@startuml
!define DOUBLE(x) x x
!definelong AUTHEN(x,y)
x -> y : DOUBLE(hello)
y -> x : ok
!enddefinelong
AUTHEN(Bob,Alice)
@enduml
```

#### 13.7 Default values for macro parameters

It is possible to assign default values to macro parameters.

```
@startum1
!define some_macro(x, y = "some default" , z = 'another default' ) x and y and z
class foo {
   some_macro(Z1, Z2, Z3)
   some_macro(Z1, Z2)
   some_macro(A)
}
```

13.8 条件判断 13 预处理

#### 条件判断 13.8

使用!ifdef XXX 和 !endif 指令进行有条件的绘制。 只有当!ifdef 指令后的常量被定义之后,两个指令之间的命令才会有效。 还可以添加!else 部分,当常量没有被定义的时候这部分生效。

@startum1 !include ArrayList.iuml @enduml

#### File ArrayList.iuml:

class ArrayList !ifdef SHOW\_METHODS ArrayList : int size() ArrayList : void clear() !endif

之后就可以用!define 指令激活条件判断部分。

@startuml !define SHOW\_METHODS !include ArrayList.iuml @enduml

还可以使用!ifndef 指令,含义跟!ifdef XXX 正好相反。

You can use boolean expression with parenthesis, operators and | | in the test.

```
@startum1
!define SHOW_FIELDS
!undef SHOW_METHODS
class foo {
!ifdef SHOW_FIELDS || SHOW_METHODS
This is shown
!endif
!ifdef SHOW_FIELDS && SHOW_METHODS
This is NOT shown
!endif
@enduml
```

#### 搜索路径 13.9

可以在命令行指定"plantuml.include.path"属性。 例如:

java -Dplantuml.include.path="c:/mydir" -jar plantuml.jar atest1.txt

注意 -D 选项必须在 -jar 选项之前,如果 -D 位于 -jar 之后,那么 -D 选项将会被用于定义 plantuml 的预处理常量。

13.10 高级特效 13 预处理

## 13.10 高级特效

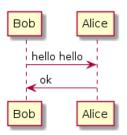

可以使用 ## 在宏参数之后追加文字。

@startuml
!definelong COMP\_TEXTGENCOMP(name)
[name] << Comp >>
interface Ifc << IfcType >> AS name##Ifc
name##Ifc - [name]
!enddefinelong
COMP\_TEXTGENCOMP(dummy)
@enduml

还可以在宏定义中定义其他宏。

@startuml
!define DOUBLE(x) x x
!definelong AUTHEN(x,y)
x -> y : DOUBLE(hello)
y -> x : ok
!enddefinelong
AUTHEN(Bob,Alice)
@enduml

宏支持根据参数个数的多态定义。

@startuml
!define module(x) component x <<module>>
!define module(x,y) component x as y <<module>>
module(foo)
module(bar, barcode)
@enduml

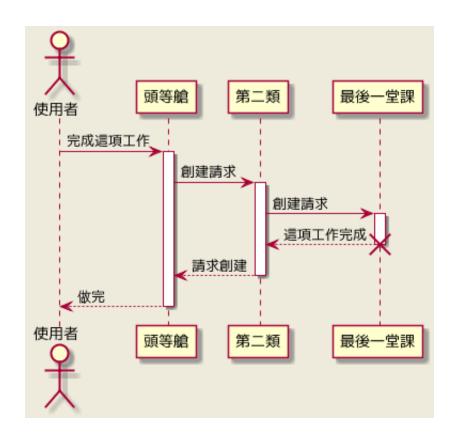

当使用文件引入的时候可以使用系统环境变量或者预定义常量。

!include %windir%/test1.txt
!define PLANTUML\_HOME /home/foo
!include PLANTUML\_HOME/test1.txt

# 14 国际化

PlantUML 语言使用字符定义角色、使用案例等待,但是字符并不仅限于 A-Z 的拉丁字符,它可以是来自任何语言的字符。

@startuml skinparam backgroundColor #EEEBDC actor 使用者 participant "頭等艙" as A participant "第二類" as B participant "最後一堂課" as 別的東西 使用者 -> A: 完成這項工作 activate A A -> B: 創建請求 activate B B-> 別的東西: 創建請求 activate 別的東西 別的東西 --> B: 這項工作完成 destroy 別的東西 B --> A: 請求創建 deactivate B A --> 使用者: 做完 deactivate A @enduml

#### 14.1 字符集

读取 UML 描述文件时使用系统默认的字符集。一般情况下这没有问题,但是有时你可能想使用其他字符集,如使用如下命令:

java -jar plantuml.jar -charset UTF-8 files.txt

或者使用 ant 任务:

14.1 字符集 14 国际化

```
<target name="main">
<plantuml dir="./src" charset="UTF-8" />
</target>
```

下面是可用的字符集 (这依赖于你的 Java 安装情况): ISO-8859-1, UTF-8, UTF-16BE, UTF-16LE, UTF-16.

# 15 可用的色彩名称

以下是 PlantUML 中可用的色彩名称. 这些名称是大小不敏感的。

AliceBlue	GhostWhite	NavajoWhite
AntiqueWhite	GoldenRod	Navy
Aquamarine	Gold	OldLace
Aqua	Gray	OliveDrab
Azure	GreenYellow	Olive
Beige	Green	OrangeRed
Bisque	HoneyDew	Orange
Black	HotPink	Orchid
BlanchedAlmond	IndianRed	PaleGoldenRod
BlueViolet	Indigo	PaleGreen
Blue	Ivory	PaleTurquoise
Brown	Khaki	PaleVioletRed
